MARCH ... 1995

Recently developed stand-level yield prediction

functions for loblolly and slash pine plantations in East Texas by Lenhart (in press) have been incorporated into

Source of yield prediction functions:

Lenhart, J. D. in press. Total and partial stand-level yield prediction for loblolly and slash pine plantations in East Texas. South. J. Appl. For.

The spreadsheets are versatile in that they provide the user options for varying plantation parameters and product utilization standards.

computerized spreadsheets.

The spreadsheets are useful in that the user can estimate the yield per acre of a current plantation or the predicted yield of a future plantation.

The role of fusiform rust is incorporated into the yield prediction equations.

However, thinnings are not considered in the functions. YIELD
