This Project is brought to you for free and open access by the School of Human Sciences at SFA ScholarWorks. It has been accepted for inclusion in Interior Design Senior Projects by an authorized administrator of SFA ScholarWorks. For more information, please contact cdsscholarworks@sfasu.edu.
Portfolio of Nicole Freund
Interior design gives you the opportunity to express your creative ideas that are both multifunctional and comfortable to the client. I love exploring new methods and techniques that will grow my education in design. Seeing something that I took from a small idea and made it into something big that benefits both the client and me, is the greatest reward money can buy.
My name is Nicole Freund, I grew up in Houston, Texas. I will receive a Bachelor of Science degree in interior design at Stephen F. Austin State University. My passion for interior design is creating a space by making it functional and ergonomic for the client.

Work Experience
CLIENT

Interior Design Department

PROGRAMMING

SFA interior design teachers wanted to transform their classroom into a collaborative and multifunctional space.

SOLUTION

The designer placed height adjustable tables along the north and west wall to give students the option to sit or stand while they work. This provides elevated heights in the classroom for a better sight view. The furniture specified allows for multifunction collaboration for group work and teacher interaction with the students.

SOFTWARE USED

Autodesk Revit
Adobe Photoshop
Color scheme was selected to brighten up the room and to provide inspiration for the students.

The wall in the room are wrapped in glass whiteboards to allow collaboration and for the design students to work together on projects. The mobile whiteboards allow the students to move it freely around the room for further collaboration.

The Dart, Wisp, and Smartlink tables have casters which gives the teacher the option to transform the class into lecture style or break up into small groups.
CLIENT
College of Business Department

PROGRAMMING
The classroom seated 40 students and had existing trapezoid tables that were not conducive to test taking.

SOLUTION
The designer used a combination of two different tables to provide lecture and collaboration. The room holds 42 students. We ordered new Sit-On-It Lumin chairs with no arms so people of any size can fit in the chair and it was easy to clean.

SOFTWARE USED
Autodesk Revit
CLIENT
Baker Pattillo Student Center

PROGRAMMING
The university wanted to remodel the space by adding new furniture. The space needed to be luxurious, traditional, and match the current aesthetics of the building.

SOLUTION
By placing the furniture in a U-shape it allows easy flow of conversation and provides seating in the pre-function spaces for the surrounding suites.

SOFTWARE USED
Autodesk Revit
Healthcare
CLIENT
Executive Director

PROGRAMMING
The Nacogdoches Treatment Center is Alzheimer’s day care facility that allows families to drop off their loved ones for the day. The Treatment Center needed to expand by adding another building to allow their patients to permanently live there.

SOLUTION
The designer’s group did a lot of research on the needs for Alzheimer’s patients. By creating a circular path in the middle of the building, this allows the residents to wonder continuously. The designers added a hospice room in the south east side for residents that need extensive care. We placed the entrance to both buildings adjacent from each other for ease of access.

SOFTWARE USED
Autodesk Revit
Resident Bedroom & Bathroom
Between both resident's entrance bedroom door is a shadow box filled with their personal treasures and pictures of family and friends. Due to the fact that residents have a hard time remembering what their room number and location of their room, the shadow box will help them remember which bedroom is theirs.

Inspiration Picture
The shadow box will have a divider down the middle so two residents can use it. Below, you can see the resident added pictures of his family and personal memories.
Hospice Bedroom
The bedroom was designed for patients that need extensive care and for their friends and family to be with them for their last moments with the resident. The room is equipped with a mini kitchen, a pull-out sofa for family or friends to stay the night, a chair and a hospital bed. The designer's placed an emergency exit for when the resident is deceased, the ambulance can park next to the building and discretely remove the body.

Hospice Bedroom
The bathroom is designed to meet ADA standards that includes an ADA stand-up shower and toilet. The designer made the bathroom very spacious so patients in wheelchairs can move around easily.
Residential
CLIENT
Homeowner

PROGRAMMING
The resident needed assistance in choosing materials for their kitchen. They wanted a rustic ranch style theme to go along with the rest of the house.

SOLUTION
The designer chose these materials to give the viewer an eye pleasing effect throughout the whole space.

SOFTWARE USED
Adobe Photoshop
Hand Rendering
Thank you for your time!
