I picked 20 random students and gave them a Japanese lecture through Skype and one with my VR website. After each lecture, the student was interviewed for their input on the two lecture styles and had a quiz over the taught material.

The lecture with Skype used the google slides to show Japanese grammar and vocabulary.

The Institute for Organizational Behavior Research is run by recruit management Solutions Co. in Japan. This company conducts research in order to find the major reasons for those who had a full time job and tried to learn English, yet failed to keep studying.

Since it is available any time it is convenient for continuous study.

VR lectures facilitate memorization by connecting the contents students learn with images in VR environments.

Teaching second languages in VR web browsers is a prospective future business, and potentially, lucrative.
