The Historic Preservation Office of the Caddo Nation would like to thank the following people at the Gilcrease Museum of the Americas for their support on this project: Mr. Randy Ramer, Collections Manager and Curator of Anthropology, Mr. Jeremy Planteen, Intern, Ms. Kelly Finnigan, NAGPRA Coordinator, and Dr. Duane King, Director. A big “thanks” goes to our archeological consultants and documentation team, Dr. Tim Perttula, who has done fantastic work for the Caddo Nation and the archeological community for over three decades. We also wish to thank Mr. Mark Walters for joining our team and his efforts on this project. We thank Mr. Bo Nelson, who took the many artifact photographs, who has always been an invaluable member of our team. We wish to thank the Director of the Caddo Nation Heritage Museum, Ms. Kim Penrod, for scanning and archiving all of the photographs and drawings. We sincerely thank Mary Botone, our administrative assistant, for managing the office in our absence. We also wish to thank Mr. Duncan McKinnon who helped part of one day with the vessel documentation effort, and also shared information and maps about the Battle site. Sandy Hannum prepared the various maps and site burial feature maps used in this report. Lastly, we would like to thank the National Park Service NAGPRA program for providing us the funding to make this project and report possible.

FOREWORD: “A DIFFERENT PERSPECTIVE”

Robert Cast

In the gift shop of the Gilcrease Museum of the Americas in Tulsa, Oklahoma, there is a large coffee table style book entitled *Treasures of the Gilcrease: Selections from the Permanent Collection*. One of my favorite artists associated with Oklahoma is painter Charles Banks Wilson, so I quickly thumbed through page after page to see what paintings of his they might have selected for presentation in the book. One of the first things I noticed was that on page 93, there was indeed a beautifully detailed painting by Charles Banks Wilson of none other than Mr. William Thomas Gilcrease sitting on a small bench supposedly outside the original museum. Commissioned in 1958, the painting also had two items positioned as props sitting on the bench in front of Mr. Gilcrease: A Caddo ceramic vessel sitting on top of what appears to be a leather-bound book entitled *Plates of American Indians*. I am sure that many people who have wandered around the gift shop and perhaps thumbed through this book never paid much attention to these particular items in this portrait painting.

Treasures of the Gilcrease summarizes the many contributions and efforts of Thomas Gilcrease to preserve art and history in its many forms. There is no doubt that because of his collections, the city of Tulsa has become one of the unique places holding a wondrous wealth of human heritage from the many diverse peoples of Oklahoma and from around the world.

Ironically, however, the focus of our particular report is on archeological collections at the Gilcrease Museum from the state of Arkansas. The irony, of course, is that these collections can be culturally affiliated to an Indian tribe—the Caddo Nation of Oklahoma—presently living within the state of Oklahoma, a tribe that has survived for hundreds, if not thousands of years in the states of Oklahoma, Arkansas, Louisiana, and Texas.

Gilcrease, Lemley, Agee, Hodges, Perino, and Schambach, are all names familiar to archeologists who have studied the artifacts of the Caddo Indians. From the records held at the Gilcrease Museum, one cannot help but see that the past efforts of most of these men are now a part of our present-day efforts to establish a cultural connection between the Native American Graves Protection and Repatriation Act (NAGPRA) items housed in the Gilcrease Museum and the Caddo Nation of Oklahoma.

The beautiful polished vessel in the painting of Mr. Gilcrease is what Caddo archeologists who study such things would call a *Hodges Engraved* vessel. A master craftswoman from the Caddo Indians surely made this vessel, probably about 400 years ago or thereabouts. The Caddo were some of the Nation’s (and Oklahoma’s) first and greatest artisans when it came to molding and crafting such durable, imaginative ceramic vessels.

Art, history, and beauty aside, the Caddo people placed these vessels with their deceased as funerary offerings. These vessels have not only a special meaning to archeologists (on a scientific level) but they have a very special meaning and a direct relationship to the spiritual and cultural beliefs of the Caddo people. Each offering placed in the grave has a special purpose and special place in the Caddo world. These vessels are skillfully made from the clay of the earth. The Caddo people say they came from the earth and when they die they will return back to where they came from. These vessels are physical manifestations of the symbols and cycles of this ancestry that represent a part of their daily lives, and ultimately, a part of their final destiny.

Being somewhat familiar with Charles Banks Wilson through his daughter Carrie Wilson (past Osage and Quapaw NAGPRA Director), Bobby Gonzalez and I have had the privilege to meet Mr. Wilson on several different occasions when we were on business in the Fayetteville, Arkansas, area. Mr. Wilson always claimed Oklahoma as his home even though he was born in Springdale, Arkansas. He would joke that he was “conceived” in Oklahoma but happened to be born in Arkansas. The last time we met with him he was 90 plus years of age, still creating art and still very excited about the art he had created over the past 70 years. During our conversations, he told us proudly that it seemed everywhere he went he was always referred to as simply “Carrie’s Father.”

True artisans and painters may see the portrait of Thomas Gilcrease much differently than I do. Although it is a portrait of the man the museum was named after, my focus and attention locked only onto the tiny vessel sitting in front of him, as I wondered if it would be a part of our documentation effort for this collection, and wondered if Mr. Gilcrease had any idea that in 50 years from that portrait day the Caddo would be documenting and reclaiming under federal law NAGPRA objects within the museum. I can now enjoy this painting from a whole different perspective.

During the week of August 11th through August 15th, 2008, a small group of archeologists, preservationists, and a member of the Caddo Nation, studied a part of the Lemley Collection at the Gilcrease Museum of the Americas. The Lemley Collection alone has over 1400 complete ceramic Caddo vessels. Most of these were plowed up, dug up, removed, and then later sold to the museum. Back during those times, no one asked the Caddo what they thought about these things, and no one asked them about the importance of the places where these graves were located or the sacredness of any of the human remains and the funerary objects placed with them. Being of Creek ancestry, Mr. Gilcrease was almost obsessive about preserving and protecting Native American collections. Looking at the tiny Caddo vessel in the painting, I think I have a better understanding and much clearer picture of Mr. Gilcrease.

Introduction and Purpose of the Study

This report is the latest in a series of reports produced and published by the Caddo Nation of Oklahoma, Historic Preservation Program, that concern the documentation of funerary objects in museum facilities that are subject to the provisions and regulations of the Native American Graves Protection and Repatriation Act (NAGPRA) (Gonzalez et al. 2005; Cast et al. 2006; Perttula et al. 2008a, 2008b). These documentation studies have been done either with grants from the National Park Service, or through funding provided by the museum facility. In the case of the present study of Caddo funerary objects in the collections at the Gilcrease Museum in Tulsa, Oklahoma, the documentation effort was supported by a NAGPRA grant provided by the National Park Service (NPS).

Information on the Sites and the Collections

During the course of the current NAGPRA grant, we completed documentation in August 2008 of 288 funerary objects at eight different Caddo sites or localities in the Gilcrease Museum collections. The principal funerary objects are ceramic vessels, and our documentation includes 241 ceramic vessels from mortuary contexts at seven different Caddo sites in the Boyd Hill and Spirit Lake localities (Figure 1) in Lafayette County, Arkansas, in the Great Bend area of the Red River: Battle Place (3LA1, n=104 vessels); the adjoining Wm. Handy Place (3LA1, n=72 vessels); Foster Place (3LA27, in the Boyd Hill Locality, n=6 vessels); Geo. W. Sentell Place (3LA38, n=8 vessels; the Sentell Place is an earlier name for the Lester Bros. Plantation); Lester Bros. Plantation (3LA38, n=3 vessels); Lester Bros. Place (3LA48, n=43 vessels); and the Cabaness Place (3LA84, n=5 vessels) or Spirit Lake site (Hemmings 1982) (Figure 2). The Cedar Grove site (3LA97) is a well-known protohistoric and historic Caddo site in the Spirit Lake Locality (Trubowitz 1984:Figure 1-7).

Other funerary objects that we have documented from these sites for this report include:

- clay pipes (n=12) from the Battle Place and Lester Bros. Place;
- a single stone celt from a burial at the Wm. Handy Place;
- deer antler tools (n=4) from the Lester Bros. Place;
- a mussel shell tool and spoon from the Lester Bros. Place;
- 20 marine shell beads and a marine shell cup from the Battle Place, as well as two marine shell ear disks from the Lester Bros. Place;
- and seven marine shell ornaments from the Joe Russell Place (no site trinomial assigned); this site is on the Red River in the Spirit Lake Locality (see Figure 2).

Figure 1. The Boyd Hill and Spirit Lake localities in the Great Bend of the Red River in southwestern Arkansas, and other sites mentioned in the text.

Figure 2. The location of the Battle site, Handy Place, Joe Russell Place, Cabaness Place/Spirit Lake site, Sentell Place or Lester Bros. Plantation, and the Cedar Grove sites.

The cultural context of these sites clearly indicates that they are all Caddo sites, primarily (if not exclusively) occupied after ca. A.D. 1200, and the Great Bend region of the Red River is considered one of the main heartland areas of the Caddo tradition and archeological area. In this region, the earliest known Caddo sites date from ca. A.D. 900, and include both mound centers as well as associated farmsteads in a complex and socio-politically hierarchical society; by ca. A.D. 1200, these Caddo people were also farmers (Kelley and Guccione 2000:21; Perttula 2008).

In the Spirit Lake and Boyd Hill localities in the Great Bend region, Caddo sites dating after ca. A.D. 1200 have been divided into three phases: Haley (ca. A.D. 1200-1500), Belcher (ca. A.D. 1500-1670), and Chakanina (ca. A.D. 1670-1730) (Schambach 1982; Schambach and Miller 1984), primarily on the basis of the stylistically and morphologically distinctive fine ware and utility ware decorated ceramics found on them (these ceramics are best known from mortuary contexts). Haley phase sites include the following ceramic types: Haley Engraved, Handy Engraved, Hickory Engraved, Haley Complicated-Incised, Pease Brushed-Incised, and Sinner Linear Punctated (Kelley and Guccione 2000:22).

Belcher phase sites in the Great Bend region are characterized by engraved and trailed fine ware carinated bowls, bowls, and bottles (see Schambach and Miller 1984:Table 11-12): Belcher Engraved, *var. Belcher*, Belcher Engraved, *var. Ogden*, Keno Trailed, *var. McClendon*, Hodges Engraved, *var. Armour* and *var. Candler*, Avery Engraved, *var. Graves* and *var. Bradshaw*, and Glassell Engraved, *var. Atkins* and *var. McGee*. Belcher phase utility ware jars includes *var. Foster*, *var. Dobson*, and *var. Red Lake* of the Foster Trailed-Incised type, Karnack Brushed-Incised, *var. Karnack* and *var. Fish Bayou*, and Belcher Ridged, *var. Wilson's Island*. According to Schambach (1982:10), a small percentage of Belcher phase ceramics began to be tempered with mussel shell—principally in the utility wares (20%). The succeeding Chakanina phase Caddo sites have these fine wares: Belcher Engraved, *var. Owen*, Natchitoches Engraved, *var. Lester Bend*, Keno Trailed, *var. Phillips*, *var. Glendora*, and *var. Scott's Lake*, Hodges Engraved, *var. Sentell*, *var. Kelley's Lake*, *var. Armour*, and *var. Candler*, and Cabaness Engraved (Schambach and Miller 1984:Table 11-12). Chakanina phase utility ware ceramics include Foster Trailed-Incised, *var. Dixon*, *var. Moore*, *var. Finley*, and *var. Shaw*, Karnack Brushed-Incised, *var. Fish Bayou*, and Belcher Ridged, *var. unspecified*. At Cedar Grove, the best known Chakanina phase site, shell-tempered ceramics account for about 64% of the vessels from mortuary contexts, 39% of the fine ware sherds from habitation contexts, and almost 86% of the utility ware sherds (Schambach and Miller 1984:Tables 11-4, 11-6 to 11-9).

Boyd Hill Locality, Foster Site (3LA27)

The Foster site is in the Boyd Hill locality on the Red River, about 20 km north of the Battle site and the cluster of contemporaneous sites in the Spirit Lake locality (see Figure 1). This mound site has been suggested by Schambach et al. (1982:91) and Webb (1945) to have been “the major Belcher phase site in Arkansas.”

The site was first investigated by Clarence B. Moore (1912:591-619) during his wide-ranging exploration of Caddo sites on the Red River in Louisiana and Arkansas (see Weinstein et al. 2003). One of the two mounds he examined had 11 Late Caddo Belcher phase burials in it with a wide variety of funerary objects, including 246 ceramic vessels. Since that time there have been other burials excavated by amateur archeologists (including Pete Miroir) and looters, and other burials were uncovered after Red River floods (Hoffman 1970:165); the NAGPRA collections from the Foster site at the Gilcrease Museum are primarily from discoveries made after a 1938 Red River flood (see Appendix 4).

More recent investigations at the Foster site indicate that it contains extensive habitation debris and thick (up to 1 m in thickness) midden deposits (Kelley and Cox 1998:93-103). Artifacts found in these areas indicate that the site was occupied in Woodland, Early Caddo, Middle Caddo, and Late Caddo period times, but the majority of the known burials date to the Late Caddo Belcher phase.

Spirit Hill Locality Sites

The Spirit Lake locality in the Great Bend region of Southwest Arkansas (Schambach 1982:10; Trubowitz 1984:5) is centered on the Battle site on Chicaninna prairie, and includes a number of sites with early historic Chakanina phase Caddo ceramics, including Natchitoches Engraved and Keno Trilled (see Figures 1 and 2). These sites probably represent a series of contemporaneous (late 17th and early 18th century) Caddo farmstead compounds within a large but dispersed Spirit Lake village (Schambach et al. 1982:94), as well as earlier Belcher phase farmsteads associated with the Battle site and civic-ceremonial center.

The Battle Mound is the largest known Caddo mound—205 m in length, 98 m in width, and 10.4 m high—and one of the largest platform mounds in the southeastern United States (Muller 1978:321), and it was built primarily in Belcher phase times over a low (1.8 m) Haley phase mound platform. During the Belcher phase, it was here in the Great Bend region that the Caddo cultural tradition reached its pre-European contact peak in population and socio-political complexity (Pertulla 1992:24; Schambach 1989:20).

Battle Site

In addition to the large platform mound at the Battle site (Figure 3), there are at least four low mounds on the eastern side of the field east of the platform mound (Moore 1912:566-567; see also McKinnon 2008:Figure 6.1), although the location of only one of these is currently known, the others having been plowed down over the years. Moore (1912:567) located several Caddo burials in one of the low mounds.

Figure 3. General map of the Battle site, the Handy Place cemetery, and Burial Plots 1-3 from the 1938 excavations.

The funerary objects from the Battle site in the Gilcrease Museum collections are from a number of Caddo burial features scattered across the site, including several from burials on the large earthen mound itself (see Figure 3). Arkansas Archeological Survey surface collections and recent geophysical investigations (McKinnon 2008) indicate that there are borrow pits, extensive habitation areas to the north and east of the large platform mound, as well as several Caddo cemetery areas within the bounds of the site.

The best information available on the context of the Gilcrease Museum NAGPRA collections from the Battle site is the notes and burial drawings compiled by Glenn Martin in 1939 from the various excavations done at the behest of Judge Harry J. Lemley in the spring of 1938 (Martin 1939). In that work, done in Plots 1-3 north and well northeast of the large mound platform (see Figure 3), seven Caddo burials, likely adults based on the apparent size of the burial pits, were excavated and funerary objects recovered that are now at the Gilcrease Museum. Plot 1 is in a habitation area with a 10-24 cm thick midden deposit covering ca. 2 acres (Martin 1939); this area appears to contain a cluster of domestic Caddo structures (McKinnon 2008:Figure 6.1). Plots 2 and 3 more than 900 m northeast of the platform mound, and both plots are situated on small rises; vessels from burials had previously been reported from these areas after flooding (Martin 1939).

These burials contained the bodies of one or two individuals laid on their backs in an extended position, with their heads facing either north (Figures 4, 6, and 7), south (Figures 5 and 10), east (Figures 8 and 9). Two of the burial features in Plot 2 (Figures 6 and 7) and one burial in Plot 3 (Figure 10) had two individuals placed together in the pit at death; these have a curious mix of Haley and Belcher phase ceramic vessels (see Appendix 1).

Figure 4. Battle site, Burial 1, Plot 1.

Figure 5. Battle site, Burial 2, Plot 1.

Figure 6. Battle site, Burial No. 1, Plot 2.

Figure 7. Burial 2, Plot 2, at the Battle site.

Figure 8. Burial 3, Plot 2, at the Battle site.

Figure 9. Burial 4, Plot 2, at the Battle site.

Figure 10. Battle site, Burial 1, Plot 3.

These burials contained several kinds of funerary offerings, including ceramic vessels (n=37) around the head and body, pipes (n=5), a celt, and red and black clay pigments. The mean number of ceramic vessels placed in the Battle site burials is 5.3, with a range of 2-8 (see Figures 4-10). Extrapolating that number with the number of ceramic vessels in the Gilcrease Museum NAGPRA collections from the Battle site

(n=104) suggests that they represent the ceramic vessel funerary offerings from approximately 20 Caddo burials.

Other important Gilcrease Museum NAGPRA contexts where Caddo burials at the Battle site have been reported include various plowed up and excavated burials (either single burials or in a cemetery) from habitation and cemetery areas in the 1920s and 1930s; a Chakanina phase burial found in 1938 at the south end of the large platform mound while digging a storm cellar; another burial found in the large platform mound with a Mound Tract Incised and Brushed shell-tempered jar; and another Chakanina phase burial on a low platform at the north end of the large platform mound, found again in 1938 while digging dirt for a chimney (see Appendix 1).

Handy Place

The Wm. Handy Place refers to a 40 acre farm owned by Wm. Handy in the 1930s and 1940s (Martin 1939) situated just north of the much larger Battle Place (see Figure 3); in the early 1910s this area was known as the Harrell Place (Moore 1912:573; Weinstein et al. 2003:Appendix A-2). There are extensive Caddo habitation deposits and cemeteries on this place (Hoffman 1970:163-164), an alluvial ridge between 125-350 m north-northeast from the Handy Place cabin, with considerable numbers (more than 100) of Caddo burials having been dug at the Handy Place by amateur archeologists and looters over the years.

Some of the recovered funerary objects (pottery vessels) from this digging are in the Gilcrease Museum NAGPRA collections, along with notes on the January and February 1940 excavation of four burials (Figure 11), one without ceramic vessels but including a ceramic ear plug and a celt, and other less well-documented amateur archeological excavations done in 1941. At the Wm. Handy Place, the NAGPRA collections are from burials excavated by Horace McLendon, Glenn Martin, W. Gamel Smith, Robert Shelton, Guy W. Stacy, and Pete Miroir in 1940 and 1941 (see Appendix 2).

Figure 11. Burials A-C (1940), at the William Handy Place.

The Caddo individuals buried at the Handy Place were placed in an extended supine position, with the head to the south, facing north. Funerary offerings, primarily ceramic vessels, were placed around the head, shoulders, and legs (see Figure 11) of the deceased. Notes in the Gilcrease Museum files on 14 documented Caddo burials excavated in 1940 and 1941 from the Wm. Handy Place had 47 ceramic vessels (0-10 per burial) and a ceramic pipe. The mean number of ceramic vessels per burial feature is 3.4 vessels. The 72 vessels in the Wm. Handy Place collections at the Gilcrease Museum are thus likely from at least 20 individual Caddo burials.

Geo. W. Sentell Place

The eight vessels in the Gilcrease Museum collections from the Geo. W. Sentell Place on Lester Bend of the Red River (see Figure 2) came from one or more Caddo burials excavated in 1909 (see Appendix 5). These vessels include an effigy bottle, a tripod bottle, three other bottles, two carinated bowls, and a utility ware jar.

Lester Bros. Plantation and Lester Bros. Place

The Lester Bros. Plantation (3LA38) and the Lester Bros. Place (3LA48) refer to the same general area (a low rise) along the Red River floodplain in Lester Bend, where “one or more cemeteries” (Hemmings 1982:69) had been exposed and excavated in the 1920s and 1930s, including an area known as the “Blue Hole.” These cemeteries are likely part of a series of farmstead compounds dispersed along this part of the Red River (Schambach et al. 1982:94), about 3 km southwest of the Battle site (see Figure 2); Schambach et al. (1982:94-95) suggested that based on the number of vessels found on Lester Bend, “the vessels...must represent a parent population [of Caddo] of many hundreds and it seems clear that there was a major concentration of compounds around Lester Bend.” This area had previously been owned by Geo. W. Sentell.

Funerary offerings from these burials (perhaps from 20-22 individual burial features) ended up in the Judge Lemley collection, including 118 vessels (Schambach et al. 1982:Table 6-1), mussel shell tools, clay pipes, and a perforated bear tooth. The vessels tallied by Schambach et al. (1982) included the following ceramic types: Avery Engraved (n=6), Belcher Engraved (n=23), Keno Trilled (n=9), Glassell Engraved (n=4), Hodges Engraved (n=8), Natchitoches Engraved (n=9), Taylor Engraved (n=2), Haley Engraved (n=2), untyped engraved (n=14), plain wares (n=5), untyped punctated-incised (n=3), Karnack Brushed (n=2), Belcher Ridged (n=5), Cass Appliqued (n=3), Foster Trilled-Incised (n=19), Cowhide Stamped (n=2), and untyped coarse ware (n=3). A number of these offerings eventually ended up in the Gilcrease Museum collections (see below). Specifically, the Lester Bros. Plantation and Lester Bros. Place NAGPRA collections in the Gilcrease Museum are from graves in at least one cemetery exposed after a 1915 Red River flood, burials exposed and excavated in the 1920s by various individuals, including burials exposed after dynamiting of a Red River levee in June 1929 (see Appendix 3).

Cabaness Place

The Joe Cabaness (also spelled Cabinas or Cabaniss) Place was first investigated by Clarence B. Moore (1912:573-574). The site is about 5 km north of the Battle site on the Red River (see Figure 2). Burials with associated ceramic vessels had been found here during the construction of a levee sometime before Moore’s work, but, although Moore (1912:574) noted human remains and pottery vessel fragments on the surface, he did not locate any Caddo burials at this place despite “a considerable amount of digging,” but did uncover a dog burial.

In 1979-1980, the Arkansas Archeological Survey carried out excavations at the Spirit Lake site (3LA83) in advance of construction work associated with the Spirit Lake Revetment along the Red River (Hemmings 1982:55). Hemmings (1982:56) indicates that the “Spirit Lake site is evidently the same location investigated by Clarence B. Moore...called the Cabinas Place.” During the work there, midden deposits, a dog burial, and the burial of a Caddo child were excavated at the Spirit Lake site from a Chakanina phase farmstead compound. Found as funerary offerings with the child were two Hodges Engraved vessels, a carinated bowl and a Hodges Engraved, *var. Candler* bottle (Hemmings 1982:78 and Figure 5-10), as well as a large vessel section from a Simms Engraved carinated bowl. Approximately 42% of the ceramic sherds from the habitation deposits are shell-tempered (Hemmings 1982:Table 5-3), consistent with a Chakanina phase Caddo occupation.

The vessels (n=5) that we have documented in the Gilcrease Museum NAGPRA collections from the Cabaness Place were collected by W. P. Agee in 1915, probably from one burial (see Appendix 6). Hemmings (1982:82 and Figure 5-12) illustrates six vessels from the Cabaness Place, including one found by a collector in 1974, two of which have been documented in our study. These include a Belcher Ridged jar (n=1), a Hodges Engraved, *var. Candler* bottle, Natchitoches Engraved bowls (n=2) and Natchitoches Engraved bottles (n=2), and several plain bowls.

Joe Russell Place

The Joe Russell Place is another Caddo farmstead and associated cemetery in the Spirit Lake locality. Schambach et al. (1982:94) noted that many “late vessels” (Keno Trilled and Natchitoches Engraved have been found at the Joe Russell place over the years. For this NAGPRA study, we documented only marine shell ornaments from a single Caddo burial excavated in 1915 at this habitation site on the Red River (see Figure 2).

Ceramic Vessel Documentation Protocol

Because of the number of ceramic vessels in the Gilcrease Museum NAGPRA collections that we were able to document under the NPS NAGPRA grant, we established a documentation protocol to assist in the study of each of the vessels examined in 2008. Each of the ceramic vessels in the collections is described and illustrated utilizing a consistent set of ceramic morphological, functional, and stylistic attributes modeled after the presentations in Gonzalez et al. (2005), Cast et al. (2006), and Perttula et al. (2008a, 2008b). The purpose of the documentation is to thoroughly characterize the assemblage of ceramic vessels in the collections. Appendix 1-6 of this document are the completed vessel recordation forms from the Battle, Wm. Handy, Foster Place, Geo. W. Sentell, Lester Bros. Plantation and Lester Bros. Place, and the Cabaness Place sites.

Vessel illustrations include a photograph of each vessel, along with an accompanying drawing by Bobby Gonzalez in several cases, that serve to better portray their decoration, shape, and surface texture. In the case of a number of ceramic vessels, engraved design motifs on bowls, compound bowls, and bottles are closely compared with Red River Caddo ceramic types and varieties defined by Schambach and Miller (1984) and Kelley (1997).

The following attributes were employed in this ceramic vessel study:

Non-plastics: Deliberate and indeterminate materials in the paste (Rice 1987:411), including a variety of tempers (grog or crushed sherds, bone, hematite/ferruginous sandstone, shell, quartz sands, etc.) and “particulate matter of some size.” The grog, bone, shell, and hematite/ferruginous sandstone non-plastics appear to have been deliberately added to the paste as tempers. The bone and shell used for temper had been burned and calcined, then crushed, before it was added to the paste.

Vessel Form: Vessel form categories include open containers (bowls of several sizes, including effigy bowls, carinated bowls, and compound bowls) and restricted containers, including jars and bottles. As restricted containers, jars allow access by hand, but bottles do not (Brown 1996:335). There are several compound form vessels, one where two different vessel forms have been conjoined to create a single unique vessel form. This ceramic practice is one of the distinctive features of Great Bend ceramic vessel assemblages (cf. Bonds 2006). Other form attributes that were recorded include the rim profile (outflaring or everted, vertical or standing, and inverted), lip profile (rolled to the exterior, rounded, flat, or thinned), and base shape (flat or rounded).

Core Colors: Observations on ceramic cross-section colors permit consideration of oxidation patterns (Teltser 1993:Figure 2A-H), and thus the conditions under which the vessel was fired and then cooled after firing. Comments are included for these attributes on the presence and location of fire-clouding, sooting or smudging from cooking use (Skibo 1992), and charred organic remains.

Wall Thickness: Thickness was recorded in millimeters, using a vernier caliper, at the lip, along the rim, at several points along the body, and at the base when possible (only for the vessels that were not complete).

Interior and Exterior Surface Treatment: The primary methods of finishing the surface of the vessels includes either smoothing, burnishing, and polishing (Rice 1987:138). Brushing, while a popular method of roughening the surface (particularly the body) of large and small Middle (ca. A.D. 1200-1400) and Late Caddo (ca. A.D. 1400-1680) period cooking jars in several parts of the Caddo area, is here considered a decorative treatment rather than solely a functional surface treatment (cf. Rice 1987:138), although not all Caddo ceramic analysts treat brushing as a decorative treatment (cf. Gadus et al. 2006:31). Smoothing

creates “a finer and more regular surface...[and] has a matte rather than a lustrous finish” (Rice 1987:138). Burnishing, on the other hand, creates an irregular lustrous finish marked by parallel facets left by the burnishing tool (perhaps a pebble or bone). A polished surface treatment is marked by a uniform and highly lustrous surface finish, done when the vessel is dry, but without “the pronounced parallel facets produced by burnishing leather-hard clay” (Rice 1987:138).

The application of a hematite-rich clay slip (Ferring and Perttula 1987), either red or black after firing in an oxidizing or reducing (i.e., low-oxygen) environment, is another form of surface treatment noted in this assemblage, although not with the frequency seen in other Caddo ceramic vessel assemblages from other parts of the Caddo archeological area (see Perttula et al. 2007, 2008a). The clay slip is more frequently applied on the vessel exterior than on the interior surface, and then was either burnished or polished after it was leather-hard or dry.

Height and Orifice Diameter: These attributes, measured in centimeters, were recorded with a ruler.

Diameter at Bottom of Rim and Base Diameter: Also recorded in millimeters using a ruler, these attributes permit characterization of the overall contour and shape of the vessel.

Volume: Vessel volume in liters was determined by filling (to within 1 mm of the lip) the vessel with lentil seeds, then dumping the lentil seeds in containers of known volume. In estimating the volume of vessels with holes, the vessel was first filled with a cloth that conformed to vessel contours, then the lentil seeds were poured into the depression in the cloth to within 1 mm of the top of the lip. Then they were dumped into containers of known volume. In cases where the vessels were not (or could not be) reconstructed, but measurements of height and orifice diameter were obtained, volumes were estimated by comparison with known vessel volumes of specific forms (i.e., carinated bowl, jar, bottle, compound bowl, and bowl) in other documented Caddo vessel assemblages.

Decoration: Decorative techniques present in the Gilcrease Museum NAGPRA vessel collection from sites in southwestern Arkansas include engraving, incising, trailing, punctating, brushing, stamping, and appliquing, and on certain vessels, combinations of decorative techniques (i.e., brushed-punctated) created the decorative elements and motifs. Engraving was done with a sharp tool when the vessel was either leather-hard, or after it was fired, as were the tick marks often seen on vessels in this collection, while the other decorative techniques were executed with tools (stamping, trailing, incising, and punctation), by adding strips of clay to the wet body (appliqu), using frayed sticks or grass stems (brushing) dragged across the body surface, or fingernails (certain forms of punctations), when the vessel was wet or still plastic. Excising is considered a form of engraved decoration, where the clay is deliberately and closely marked/scraped and carved

away with a sharp tool, usually to create triangular elements, tick marks, or excised punctations.

Another form of vessel decoration is the use of red (hematite or ochre) or white (kaolin clay) clay pigments that have been smeared or rubbed into the engraved lines of certain vessels.

Type: The kinds of ceramic types and defined varieties in the Gilcrease Museum NAGPRA collections follow Webb (1959), Suhm and Jelks (1962), Schambach and Miller (1984), Early (1993), and Kelley (1997).

Vessels from the Battle Site (3LA1)

A total of 104 vessels were documented in the Gilcrease Museum NAGPRA collections from the Battle site (Table 1). This includes 13 bowls (12.5%), among them three effigy vessels, 23 carinated bowls (22.1%), 28 bottles (26.9%), and 40 jars (38.5%).

*cut-down and recycled vessel

Almost 58% of the Battle Place vessels are from engraved, trailed, and red-slipped fine wares. The remainder of the Battle Place collection are plain or decorated utility wares (i.e., coarse wares, cf. Schambach and Miller 1984:109), principally jars (see Table 1).

With a few exceptions, primarily in the jars and in the case of one Handy Engraved bowl, the ceramic vessels from burial contexts are relatively consistently small in height and volume (see Table 1). There is little range in mean volume in the carinated bowls (coefficient of variation [CV]=22) or the bottles (CV=29) compared to the bowls (CV=43) and jars (CV=48). The mean volume in liters of the different vessel forms is: 0.46 ± 0.20 (ranging from 0.15-1.20) for bowls; 0.54 ± 0.12 (ranging from 0.31-0.77) for carinated bowls; 0.45 ± 0.13 (ranging from 0.13-0.75) for bottles; and 0.93 ± 0.45 (ranging from 0.20-2.63) for the jars. The largest vessels (with volumes between 1.75-2.63 liters, n=6) are all jars, equally divided between Haley phase and Belcher phase mortuary vessels. The bottles and jars from the Battle Place are larger in volume than those from either the Wm. Handy or Lester Bros. Place/Plantation sites, but not significantly so (see below).

Most of the Battle site vessels have been tempered with grog (53.9%) or grog and burned bone (29.8%). Another 7.7% have been tempered with mussel shell, and 2.9% have both grog and mussel shell added to the vessel clay paste. Less than 2% of the vessels are tempered with bone (1.9%), grog-bone-hematite (1.9%), and grog-hematite (0.9%); one vessel did not have an obvious added temper. The shell-tempered vessels from the site (10.6% of all the vessels) are Belcher phase and Chakanina phase styles, including examples of Foster Trailed-Incised, *var. Foster*, Karnack Brushed-Incised, *var. Karnack*, Mound Tract Incised and Brushed, and Natchitoches Engraved, *var. unspecified*. The Haley phase ceramic vessels are tempered with grog and/or bone.

Based simply on the relative proportions of identifiable vessels by type, more than 42% of the NAGPRA vessels from the Battle Place are from Haley phase burials (Figure 12). This compares to 30.6% of the vessels from Wm. Handy Place burials, and a maximum of 10.9% of the mortuary vessels from the Lester Bros. Plantation/Place. Clearly there was an intensive Haley phase occupation—along with mound building and the establishment of cemeteries—at the Battle Place during the period from ca. A.D. 1200-1500.

Figure 12. Selected Haley phase vessels from the Battle Place (3LA1): a, Handy Engraved carinated bowl (5425-637); b, Handy Engraved carinated bowl (5425-712); c, cf. Handy-Hatchel Engraved bottle (5425-669); d, Engraved bottle (5425-666); e, Haley Engraved bottle (5425-757); f, Engraved bottle (5425-702); g, Friendship Engraved bottle (5425-753); h, Haley Complicated Incised jar (5425-656); i, Haley Complicated Incised jar (5425-747); j, Pease Brushed-Incised jar (5425-698); k, Sinner Linear Punctated jar (5425-762); l. Moore Noded bowl (5425-721).

The most important Haley phase ceramic types at the Battle place are Handy Engraved bottles and carinated bowls (25%) (see Figure 12a-c), Friendship Engraved bottles and carinated bowls (20.4%) (see Figure 12g), Haley Engraved bottles (9.1%) (see Figure 12e, but probably also Figure 12d, f), and Haley Complicated-Incised (9.1%, see Figure 12h-i) and Pease Brushed-Incised (9.1%, see Figure 12j) jars. The Friendship Engraved vessels likely were made by Caddo groups living in the mid-Ouachita River region to the northeast (Early 1993:5). Unambiguous burials with Haley phase ceramic vessels at the Battle Place include Burial 3 in Plot 2 (see Figure 8), Burial 4 in Plot 2 (see Figure 9), and Burial 1 in Plot 3 (see Figure 10), in the northeastern part of the site (see Figure 3).

Belcher phase ceramic vessels identified to type and/or variety account for 19.3% of the Battle Place vessels. They include Belcher, *var. Belcher* carinated bowls (30% of the identified Belcher phase ceramic vessels by type), Figure 13a), Mound Tract Incised and Brushed (15%, Figure 13b-c) and Cowhide Stamped jars (10%), Foster Trailed-Incised, *var. Foster* (10%, Figure 13d-e) and *var. Red Lake* (10%, Figure 13f) jars, and Karnack Brushed-Incised, *var. Karnack* (5%, Figure 13g) jars. The one Belcher Engraved bottle from this component is a *var. Soda Lake* (5%), also common at the Lester Bros. Place/Plantation Belcher phase mortuary vessels. Other ceramic vessel types from Belcher phase burials at the Battle Place include Avery Engraved, *var. Bradshaw* (5%, Belcher Ridged, *var. Belcher Ridged* (5%), and Simms Engraved (5%). Other than plowed up burials in the fields at the Battle Place with Belcher phase ceramic funerary offerings (see Appendix 1), Burial 1 in Plot 1 (see Figure 4) north of the large platform mound appears to be a Belcher phase interment.

Figure 13. Selected Belcher phase vessels from the Battle Place: a, Belcher Engraved, *var. Belcher* carinated bowl (5425-674); b, Mound Tract Incised and Brushed jar (5425-738); c, Mound Tract Incised and Brushed jar (5425-746); d, Foster Trailed-Incised, *var. Trailed-Incised, *var. Red Lake* jar (5425-2431A); g, Karnack Brushed-Incised, *var. Karnack* jar (5425-655).

Early Historic Chakanina phase ceramic vessels, as well as ceramic types that apparently were in use in both the late Belcher phase and the Chakanina phase (including Hodges Engraved, *var. Armour* and *var. Candler* and Belcher Ridged, *var. Wilson's Island*, see Schambach and Miller 1984:Table 11-12), comprise 7.7% and 1.9%, respectively, of the NAGPRA vessels from the Battle Place. At the Battle site, the most common early Historic Caddo ceramic vessels in burials are Belcher Engraved, *var. Owen* (30%, Figure 14a), Natchitoches Engraved, *var. unspecified* (20%, Figure 14b), and Belcher Ridged, *var. Wilson's Island* (20%, Figure 14f). Other associated vessels in Chakanina phase burials at the Battle site include Foster Trailed-Incised, *var. Dixon* (10%, Figure 14e), Hodges Engraved, *var. Kelly's Lake* (10%, Figure 14c), and Keno Trailed, *var. unspecified* (but probably *var. Scott's Lake*) (10%, Figure 14d).

Figure 14. Selected Chakanina phase vessels from the Battle Place: a, Belcher Engraved, *var. Owen* carinated bowl (5425-2453); b, Natchitoches Engraved, *var. unspecified* carinated bowl (5425-705); c, Hodges Engraved, *var. Kelly's Lake* bottle (5425-725); d, Keno Trailed, *var. unspecified* jar (5425-730); e, Foster Trailed-Incised, *var. Dixon* jar (5425-681); f, Belcher Ridged, *var. Wilson's Island* jar (5425-683).

Chakanina phase Caddo burials, or burials with both late Belcher phase and Chakanina phase vessels apparently in association, occur in Plot 1 (see Figure 5), north of the large platform mound (see Figure 3). Others include a burial encountered at the north end of the large platform mound, and another burial encountered and excavated at the south end of the large platform mound in 1938, while a tenant was digging a cellar (see Appendix 1).

Vessels from the William Handy Place at the Battle Site (3LA1)

The Gilcrease Museum NAGPRA collections include a total of 72 vessels or vessel sherd sections from the Wm. Handy Place at the Battle site. These vessels include eight bowls (11.1%), including one effigy bowl, 26 carinated bowls (36.1%), 18 bottles (25%), and 20 jars (27.8%) (Table 2). Approximately 64% of these vessels are engraved, trailed, and red-slipped fine wares, with the remainder comprised of plain and decorated utility wares.

Grog-tempered ceramic vessels are predominant (70.8%) in the Wm. Handy Place collections. Grog-bone-tempered wares are also common (16.7%); one vessel (1.4%) has bone temper, another has grog-bone-hematite temper (1.4%), and a third has both grog and hematite temper additives (see Table 2). Almost 7% of the Wm. Handy Place vessels have shell temper, either as the sole temper (5.6%) or in combination with pieces of grog (1.4%). Only a few Belcher phase and Chakanina phase vessels from the site have shell temper.

Wm. Handy vessels are not large in size or volume, as is generally the case in the other Great Bend region vessel assemblages examined in this NAGPRA study, and only the carinated bowl forms from the site are larger in volume here than the vessels documented from the Battle or Lester Bros. Place/Plantation. Bowls have a mean volume (in liters) of 0.36 ± 0.18 (CV=50, ranging from 0.10-0.96 liters, the latter a Handy Engraved bowl); carinated bowl mean volume is 0.60 ± 0.23 (ranging from 0.23-1.11 liters); the mean volume of the bottles is 0.39 ± 0.16 (ranging from 0.15-0.71 liters); and the mean volume of the jars is only 0.71 ± 0.22 (ranging from 0.25-1.43 liters). Even the largest jars at the Wm. Handy Place—with volumes ranging from 1.00-1.43 liters—are significantly smaller than the larger vessels (1.75-2.63 liters) from the Battle and Lester Bros. Place/Plantation burials.

Haley phase vessels from the Wm. Handy Place site comprise 30.6% of the typologically identified vessels in the Gilcrease Museum NAGPRA collections (see Table 2). The most common engraved fine wares include Handy Engraved carinated bowls (22.7%, Figure 15a), Friendship Engraved bottles and carinated bowls (22.7%, Figure 15b), Haley Engraved bottles (15.6%), and Hickory Engraved (9.1%). Other engraved fine wares are a single Means Engraved carinated bowl and a bottle with Handy Engraved and Hatchel Engraved style engraved panels (Figure 15c). Fine wares account for more than 72% of the Haley phase vessels from mortuary contexts.

Figure 15. Selected Haley phase vessels from the Wm. Handy Place: a, Handy Engraved carinated bowl (5425-2116A-D); b, Friendship Engraved bottle (5425-2024); c, cf. Handy-Hatchel Engraved bottle (5425-2030); d, Moore Noded bowl (5425-682); e, Sinner Linear Punctated jar (5425-2125); f, Haley Complicated Incised jar (5425-701); g, Haley Complicated Incised jar (5425-2128).

The utility wares from Haley phase burials at the Wm. Handy Place are dominated by Haley Complicated Incised jars (18.2%, see Figure 15f-g). Other utility wares include a Sinner Linear Punctated jar (see Figure 15e) and a Moore Noded bowl (see Figure 15d).

A significant proportion (26.4%) of the Wm. Handy Place ceramic vessels are types and varieties known to date to Belcher phase times (Figure 16, see Table 2). There are several Belcher phase burials from the Wm. Handy Place cemetery in the NAGPRA collections, including Burials 1, A, and B excavated in 1940 and 1941 (see Figure 11 and Appendix 2). Among the fine wares, Belcher Engraved, *var. Belcher* carinated bowls (31.6%, Figure 16a) and *var. Ogden* bottles (10.5%, Figure 16d-e), as well as Taylor

Engraved (10.5%), and Glassell Engraved, *var. Glassell* (5.3%) and *var. Atkins* (5.3%) carinated bowls are the most abundant.

Figure 16. Selected Belcher phase vessels from the Wm. Handy Place: a, Belcher Engraved, *var. Belcher* carinated bowl (5425-2027A); b, Hodges Engraved, *var. Armour* carinated bowl (5425-2034); c, Avery Engraved, *cf. Bradshaw* carinated bowl (5425-2055); d, Belcher Engraved, *var. Ogden* bottle (5425-2022); e, Belcher Engraved, *var. Ogden* bottle (5425-2059); f, *cf. Mound Tract* Incised and Brushed jar (5425-2119); g, Karnack Brushed-Incised, *var. Karnack* jar (5425-2118); h, Cowhide Stamped, *var. unspecified* jar (5425-2131).

Utility ware vessels from Belcher phase burials at the Wm. Handy Place include Karnack Brushed-Incised, *var. Karnack* (10.5%, see Figure 16g), Foster Trailed-Incised, *var. Foster* (5.3%), and Mound Tract Incised and Brushed jars (5.3%, see Figure 16f).

Chakanina phase vessels, or vessels apparently in use in both late Belcher phase and Chakanina phase times (see Schambach and Miller 1984:Table 11-12) comprise only 11.2% of the typologically identifiable vessels from the Wm. Handy Place. This compares to 9.6% at the Battle Place and 19.5% at the Lester Bros. Place/Plantation. This includes the following fine wares: Belcher Engraved, *var. Owen* (25%), Hodges Engraved, *var. Armour* (25%) and *var. Candler* (12.5%), and Keno Trailed, *var. Scott's Lake* (12.5%, Figure 17a). Utility wares include Foster Trailed-Incised, *var. Moore* (12.5%, Figure 17c), and Belcher Ridged, *var. Wilson's Island* (12.5%, Figure 17b). Possible late Belcher to Chakanina phase burials include two excavated in 1940 (Burials 4 and 5) in the large Wm. Handy cemetery (see Appendix 2).

Figure 17. Selected Chakanina phase vessels from the Wm. Handy Place: a, Keno Trailed, *var. Scott's Lake* jar (5425-7156A); b, Belcher Ridged, *var. Wilson's Island* jar (5425-2058); c, Foster Trailed-Incised, *var. Moore* jar (5425-7147).

Vessels from the Foster Site (3LA27)

The six vessels from the Foster site in the Gilcrease Museum NAGPRA collections include three grog-tempered Belcher Engraved bottles, *var. Soda Lake* (n=2) and *var. Ogden* (n=1), a well-made shell-tempered and red-slipped Hatinu Engraved bottle with negative relief designs (see Perttula et al. 2005:30 and Figure 4.5; see also Bonds [2006:Figures 83, 160, 432, 491, 523, 536, 541, 585, 629, 632] and Moore [1912:Figures 106 and 107], from the Foster site, for other examples of Hatinu Engraved vessels in the Great Bend region), a grog-shell-tempered Belcher Engraved, *var. unspecified* carinated bowl, and a grog-hematite-tempered brushed-incised jar.

The decorative styles of these vessels from the Foster site suggest they are from a late Belcher phase or early Chakanina phase burial context, giving weight to the proportion of shell tempering (33%), and the occurrence of Hatinu Engraved vessels in late 17th-early 18th century burial features at the Clements site (41CS25) (see Figure 1).

The vessels from the Foster site are relatively small, with a mean volume of 0.48 ± 0.09 liters, and a range from 0.30-0.63 liters (see Appendix 4).

Vessels from the Cabaness Place

There are five vessels in the Gilcrease Museum NAGPRA collections from at least one Caddo burial excavated in 1915 at the Cabaness Place. They include a plain grog-tempered bowl with a cut-down rim, a grog-tempered plain seed jar, a Glassell Engraved, *var. unspecified* grog-tempered carinated bowl, a Natchitoches Engraved, *var. unspecified* shell-tempered bowl, and shell-tempered Belcher Ridged, *var. unspecified* cut-down jar (see Appendix 6). If these five burials were found together in one burial—which is unknown if that is the case or not—the occurrence of the shell-tempered Natchitoches Engraved bowl, as well as the frequency of shell-tempering (40%), would suggest that the burial dates from the early Historic Chakanina phase.

All of the vessels from the Cabaness Place are small in size, ranging from only 0.14-0.67 liters in volume, perhaps suggesting they were meant to accompany the burial of a child. The mean volume of the vessel is only 0.34 ± 0.13 liters.

Vessels from the George W. Sentell Place

The Gilcrease Museum NAGPRA collections have eight ceramic vessels from the George W. Sentell Place (see Appendix 5). These vessels are likely from two separate Caddo burials, one dating to Haley phase times (with two vessels) and the other dating to the Belcher phase (with five vessels); one straight-necked and relatively large (0.78 liters in volume) engraved and grog-tempered bottle with a unique series of engraved body panels with cross-hatched bands, half circles, and equal arm crosses probably also dates from Haley phase times. The occurrence of Haley phase vessels in this small collection is notable given that only one of the 72 vessels from the Lester Bros. Plantation/Place (see below)—the later name for the Geo. W. Sentell Place—can be identified as a Haley phase mortuary vessel.

The Haley phase grog-tempered vessels from the Sentell Place include a Handy Engraved carinated bowl and a Sinner Linear Punctated jar. These vessels range from 0.51-0.87 liters in volume (mean volume of 0.69 ± 0.18 liters).

The Geo. W. Sentell Place Belcher phase vessels are either grog (80%)- or grog-bone-tempered (20%). They are also relatively small in size (mean volume of only 0.43 ± 0.14 liters, ranging from 0.08-0.65 liters) (see Appendix 5). The vessels include a Keno Trailed, *var. McClendon* bottle, a Belcher Engraved, *var. unspecified* bottle, and an Avery Engraved, *var. Graves* carinated bowl. The other two Belcher phase vessels are relatively rare engraved forms, one being a Hodges Engraved, *var. unspecified* tripod bottle and the other an engraved headless turtle effigy with four feet and a small tail.

Vessels from the Lester Bros. Plantation (3LA38) and Lester Bros. Place (3LA48)

The Gilcrease Museum NAGPRA collections documented during the present study include three vessels from the Lester Bros. Plantation and 43 vessels from the Lester Bros. Place (Table 3). Together, there are 10 bowls (21.7%), including two effigy bowls, 13 carinated bowls (28.3%), 11 bottles (23.9%), and 12 jars (26.1%) from these places, both apparently part of the same Caddo habitation site and associated cemeteries. More than 65% of the vessels are engraved or trailed fine wares, with the remainder plain and/or decorated utility wares.

*vessel from Lester Bros. Plantation; all others are from Lester Bros. Place

Excepts for the jars, a large Keno Trailed, *var. Glendora* bottle, and one large bowl, most of the vessels from the Lester Bros. Place/Plantation are small in size and volume. By mean volume (in liters), volumes for the different vessel forms are 0.51 ± 0.31 (ranging from 0.07-1.22 liters, CV=61) for bowls; 0.45 ± 0.19 (ranging from 0.15-0.79 liters) for carinated bowls; 0.39 ± 0.16 (ranging from 0.18-0.89 liters) for bottles; and 0.80 ± 0.35 (ranging from 0.28-2.32 liters) for the jars. The largest vessels are Belcher and Chakanina phase Foster Trailed-Incised jars (see Table 3). The bowls from the Lester Bros. Place/Plantation have a larger mean volume (0.51 liters) than the bowls from the Battle or Wm. Handy Places (0.36-0.46 liters), but not dramatically so.

About 65% of the Lester Bros. Place/Plantation vessels are tempered solely with grog (see Table 3). Grog-bone-tempered vessels—quite abundant in both the Battle site

and the Wm. Handy Place vessel assemblages (29.8% and 16.7%, respectively)—account for only 8.7% of the Lester Bros. Place/Plantation vessels. Two other vessels (4.3%) at the site have both grog and hematite temper. Shell-tempered and grog-shell-tempered ceramic vessels, again from Belcher phase and Chakanina phase ceramic types, are more common here (21.8%) than they are at either the Battle (10.6%) or Wm. Handy (7.0%) sites. Nevertheless, the use of shell temper in these ceramic vessels is considerably lower than that documented at the Belcher and Chakanina phase Cedar Grove site, where 64.2% of the vessels (n=67) have either shell or grog-shell tempering (Schambach and Miller 1984). Both the Battle site and Wm. Handy Place sites have considerable numbers of non-shell-tempered Haley phase ceramics, while the Lester Bros. Place/Plantation and Cedar Grove sites have little to no evidence of pre-A.D. 1500 Caddo habitation or cemetery use.

There are five vessels (10.9% of the vessels) from the Lester Bros. Place/Plantation that are apparently from Haley phase burials. This includes one Haley Complicated Incised jar and four Hardman Engraved bowls (see Table 3); the Hardman Engraved vessels likely originated in the Mid-Ouachita region of the Caddo archeological area and were traded/exchanged to a Haley phase Caddo group in the Great Bend region. Hardman Engraved appears to be a late Mid-Ouachita phase (ca. A.D. 1450-1500) ceramic type (cf. Early 1993:91).

Belcher phase vessels from Caddo burials are very common at the Lester Bros. Place/Plantation, more so than at either the Battle or Wm. Handy places. More than 39% of the vessels identified to type and/or variety from the site are Belcher phase types (see Table 3). This includes Avery Engraved, *var. Graves* (11%, Figure 18a) and *var. Bradshaw* (11%) vessels, Glassell Engraved, *var. McGee* (5.6%, Figure 18b) and *var. Atkins* (11%) carinated bowls, Belcher Engraved, *var. Soda Lake* bottles (11%, Figure 18c-d), Taylor Engraved (11%), Keno Trilled, *var. McClendon* (5.6%, Figure 18f), Mound Tract Incised and Brushed (11%), Karnack Brushed-Incised (11%, Figure 18h), and Foster Trilled-Incised, *var. Dobson* (5.6%, Figure 18g).

Dobson* jar (5425-904); h, Karnack Brushed-Incised, *var. Karnack* jar (5425-892).

Vessels from both late Belcher phase and Chakanina phase contexts at the Lester Bros. Place/Plantation include Hodges Engraved, *var. Candler* bottles (n=2, Figure 19d-e) and Belcher Ridged, *var. Wilson's Island* jars (n=1, Figure 19i). Chakanina phase vessels represent 13% of the vessels identified to type and/or variety. There are single examples from the Lester Bros. Place/Plantation in the Gilcrease Museum NAGPRA collections of Foster Trilled-Incised, *var. Dixon* and *var. Shaw*, Belcher Engraved, *var. Owen*, Natchitoches Engraved, *var. Lester Bend* (Figure 19a), Keno Trilled, *var. Glendora*, and Hodges Engraved, *var. Sentell*.

Clay Pipes

Battle Site

There are 10 clay elbow pipes from the Battle site in the Gilcrease Museum NAGPRA collections (Table 4). One of the pipes (P-157) was found together in a plowed out grave along with vessels V-1242 to V-1245 (see Appendix 1), and several others came from burials excavated in 1938 in Burial Plot 2. Pipe P-34 came from a grave excavated in 1928 by Dan Jenkins, a tenant farmer living at the Battle site, while pipe P-31 was from a grave excavated in 1923 at the site.

All have short thick stems with flattened lips, expanding or flaring bowls with rounded lips, and short rounded heels or distal projections (cf. Hoffman 1967:Figure 6a); the heels have not been joined to the bowl, as with the likely later form of elbow pipes from the Lester Bros. Place.

Table 4. Pipes from the Battle Place.

The pipes are primarily tempered with grog (n=8, 80%); one other is tempered with grog and bone, and the last pipe has a bone temper. The pipes are smoothed or burnished on all surfaces, and none of them are decorated. Most of the pipes were fired in

a high oxygen environment (70%), leaving them a brown color. The other three pipes were fired in a low oxygen or reducing environment, producing pipes with a dark gray to black core and/or pipe surfaces. Stem rims and lips are direct and flat, while 90% of the bowls have direct and rounded rims and lips; the other has a flat lip.

The clay elbow pipes from the Battle site were made in two sizes: the smaller but more numerous (n=9) elbow pipes range between 36.5-42.2 mm in total pipe height and 41.0-56.0 mm in length, with bowl orifice diameters that range from 21.5-34.0 mm (Figure 20a-i). The one large elbow pipe is 54.0 mm in total height, 59.0 mm in length, and has a bowl orifice diameter of 41.9 mm (Figure 21); the bowl height on this pipe is 27.0 mm, while bowl heights on the smaller pipes range only from 15.2-20.0 mm (see Table 4).

Lester Bros. Place

There are two undecorated clay grog-tempered elbow pipes from the Lester Bros. Place collections. These pipes were found in 1938 in association with V-1917 to V-1923 (not documented during the present study) in a washed-out grave at the “Blue Hole” on the Lester Bros. Plantation.

The pipes have short thick stems, wide stem orifice diameters, and relatively small expanding bowls (Table 5). The stems are direct with either rounded or flattened lips, while both bowls have direct and flattened lips (Figure 22a-b). Both pipes have rounded heels that have been turned vertically and flattened somewhat against the back side of the elbow pipe bowl (cf. Moore 1912:Figure 136b, d; Hoffman 1967:Figure 6b).

Celt

Wm. Handy Place

A single pebble celt (see Kay 1984) from the Wm. Handy Place was reported to have been found in association with a burial (Burial D, N-748, 6125.18,848) dug there in 1940 by Robert Shelton. No vessels were apparently placed as funerary offerings with this individual.

This celt is made from a local Red River yellowish-brown claystone/siltstone pebble that has been well-polished, almost totally obliterating all flake scars on the celt, except for two on the bit, probably caused during tool use. This tool has a bifacial bit, and the bit is 33.0 mm in width and a maximum of 11.3 mm in length (Figure 23). The celt's total length is 76.0 mm; its mid-section width is 35.5 mm, and it has a maximum thickness of 12.7 mm.

Figure 23. Pebble celt from the Wm. Handy Place (6125-18848).

Bone Tools

Lester Bros. Place

One of the graves found at the Lester Bros. Place in 1929 had four deer antler tool funerary objects (D-23 to D-26) (Figure 24a-d). Their rounded ends suggest they are stone knapping tools or flakers (cf. Kay 1984:192 and Figure 13-17a-d).

Mussel Shell Tools

Lester Bros. Place

One perforated mussel shell tool (83 x 61 mm in length and width, M-138, 9025-459) came from a grave found in June 1929 at the Lester Bros. Place (Figure 25). Although not well preserved, this tool is probably a mussel shell hoe. The circular perforation (17.9 mm in diameter) would have held a sturdy wooden stick, creating a wood-handled hoe (see Perttula et al. 2005:44). The same grave also had two pieces of scraped mussel shell (M-85), possibly from a mussel shell spoon (Figure 26).

Marine Shell Ornaments

Battle Site

A total of 19 marine columella shell disk beads (9025.502, x70-88) were recovered in 1922 around the neck of a burial in what was described in the Lemley Collection records as at the “edge of the 2nd largest mound” at the site (Figure 27). It is unclear which of the mounds at the Battle site (see Moore 1912; McKinnon 2008) is referred to by this description, but likely this is from one of the four small mounds east of the large platform mound.

Figure 27. Marine columella shell beads from the Battle Place (9052-502).

A single small disk bead (9025.485, x-742) was found in a grave in the principal large mound at the Battle site. This bead is 13 mm in diameter and 6.3 mm thick, with a 6.3 mm perforation (Figure 28).

Figure 28. Small marine shell disk bead from a Caddo burial in the principal mound at the Battle Place (9025-485).

Also found in digging at the south end of the large mound at Battle is a small *Busycon* sp. or conch shell cup (9025.507, M-392); this was found in a late Belcher phase-early Chakanina phase Caddo burial association with six pottery vessels (V-1947 to V-1952), a bear's tooth (M-393, not documented during this project), and a single arrow point (M-394, not documented during this project). The cup retains the axial spire and anterior ends, with little evidence of polishing or modification, but the columella has been cut and scraped away, and the interior surface of the conch polished. There are two suspension holes on the axial spire and a third suspension hole at the anterior end. The cup is 165 mm in length, with a crown diameter of 110 mm (Figure 29a-b).

Figure 29. Conch shell cup from the Battle Place: a, exterior view, note suspension holes; b, interior view of cup.

Lester Bros. Place

There are two marine shell ear disks of the Clements style (see Perttula and Green 2006) from a burial in a Caddo cemetery at the Lester Bros. Place. They were found along with a number of skeletons in 1929 after being exposed by a Red River flood.

These marine shell ornaments have been found in late 17th to early 18th century contexts in several Caddo sites in northeast Texas, southwest Arkansas, and northwest Louisiana, including Clements (Perttula et al. 2005:Figure 4.24), Anglin (Perttula et al. 2009), Cedar Grove (Kay 1984:Figure 13-20a-b), Hardman (Early 1993:Figure 83a-b), and Belcher (Webb 1959:173-174).

The marine shell ear disks from the Lester Bros. Place (G-174 and G-175) are 31-33.5 mm in diameter. Each has a single central perforation as well as a single engraved line encircling the disk. That engraved line inscribes a circle between 18.2-19 mm in diameter on the two ear disks (Figure 30).

Figure 30. Marine shell ear disks from the Lester Bros. Place (accession no. 9025-272 and 273).

Joe Russell Place

Seven distinctive marine conch shell artifacts (9025-499a-g, x-398-404) were found in a grave at the Joe Russell Place in 1915. This grave had two individuals placed in it, one of which (an adult) had the marine shell conch ornaments around its neck as a necklace. The second individual in this grave was smaller in size than the first, and was thought to be an adult female.

These ornaments are made from the axial spire and portions of the columella of a conch shell (Figure 31a-b). In cross-section they are L-shaped, with a heavily polished and virtually flat but curved axial spire section comprising the bottom of the L shape, and the remainder is made up of the upper part of the columella, also heavily polished. Six of the seven ornaments have two opposed suspension holes drilled in the axial spire; one ornament has two sets of two opposed suspension holes. These ornaments range from 53-62 mm in total length and 63.5-76 mm in total width.

Figure 31. Marine shell conch ornaments from the Joe Russell Place: a, interior view; b, exterior view. Note suspension holes.

Another such marine shell ornament in the Gilcrease Museum collection comes from what appears to be the Cabaness Place near Spirit Lake (9025.260, x-357); it is described in the Gilcrease Museum records as “found in the Red River bottom near Spirit Lake,” the same description given for several vessels from the Cabaness Place. It has two suspension holes, but is only 34.8 mm in length and 26.0 mm in width (Figure 32a-c).

Figure 32. Marine shell ornaments from the Cabaness Place, Spirit Lake locality: a, exterior view; b, interior view; c, side view, showing suspension hole.

The other individual (described as a “smaller female”) in this burial at the Joe Russell Place had four zoomorphic pendants (G182-185) thought to have been made of alligator teeth (these were not examined in the present NAGPRA study). These were described as laying on “her breast.” Descriptions of these particular items, including the fact that they had diamond-shaped decorations with a single dot in the center, suggest these were actually marine shell zoomorphic pendants made from the curving walls of a conch shell columella, possibly representations of lizards, insects, or spiders (Perttula et al. 2005:46). Virtually identical zoomorphic pendants have been recovered in late 17th century contexts at a number of Caddo sites, including Belcher (see Webb 1959:Figure 131) and McLelland in northwest Louisiana; the Battle, Cedar Grove, Foster, and Friday

sites in the Great Bend region of southwest Arkansas; and the Clements, Winterbauer, and C. T. Coley sites in northeast Texas. The Lemley Collections at the Gilcrease Museum also have one of these zoomorphic pendants from a site in the Carden Bottoms in Yell County, Arkansas (9025.267B, E-5).

NAGPRA Findings and Recommendations

In this report, we have documented funerary objects from a number of prehistoric and early historic archeological sites (dating between as early as ca. A.D. 1000 and the early 18th century) in the Great Bend area of the Red River in Lafayette County, Arkansas. The archeological evidence that has been reviewed in this study, and the documentation of the funerary objects from the various sites, have led to the following findings under NAGPRA for the Gilcrease Museum NAGPRA collections:

- First, the funerary objects documented at the Battle site (3LA1), the Wm. Handy Place at the Battle site, the Foster site (3LA27), the Cabaness Place (3LA84), the George W. Sentell Place (3LA38), the Lester Bros. Plantation and Lester Bros. Place (3LA38/48), and the Joe Russell Place, and the information in the Gilcrease Museum files on the context of these offerings, as part of this study are from prehistoric and/or early Historic Caddo burials. It is well known from archeological, bioarcheological, historical, archival, and oral historical records that the prehistoric and early Historic Caddo peoples are ancestral to the modern-day Caddo Nation of Oklahoma (Rogers and Sabo 2004: Figure 1), and the sites in question are situated within the ancestral territory of the Caddo people. Consequently, the funerary objects from these sites are culturally affiliated with the Caddo Nation of Oklahoma as defined in 25 U.S.C. 3001, Section 2 and Code of Federal Regulations, Title 43, Part 10, Section 10.2(e). These funerary objects include all whole vessels and other funerary offerings (clay pipes, a celt, bone tools, mussel shell tool, and marine shell ornaments) from the Caddo sites discussed above and documented in Appendix 1-6 of this report;
- Second, the preponderance of archeological evidence supports this finding, namely (a) the manner of burial practice when that information is available (i.e., in a pit where the body of a deceased Caddo individual was laid in the grave with a variety of funerary objects placed around the body); (b) the kinds of funerary objects placed with the deceased, including culturally diagnostic and well-recognized Caddo pottery types; (c) the fact that whole pottery vessels on Caddo sites are, to a greater than reasonable certainty, from offerings from Caddo burial features; and (d) the occurrence of the burials from these sites in direct association with either Caddo habitation and mound features;
- and third, because there are no human remains in the Gilcrease Museum NAGPRA collections from the Lafayette County, Arkansas Caddo sites, the prehistoric and early Historic Caddo funerary objects from these sites are considered unassociated funerary objects (25 U.S.C. 3001, Section 2 (3)(b) and Code of Federal Regulations, Title 43 Section 10.2(d)(2)(ii)).

Vessels from the Battle Site or Place (3LA1)

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: Unknown; found in association with V-2201 to V-2203
(not documented as part of this study)

ACCESSION NO.: 5425-549

VESSEL NO.: V-2204

NON-PLASTICS: shell

VESSEL FORM: Bowl

RIM AND LIP FORM: Direct rim and a rounded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: black

EXTERIOR SURFACE COLOR: black

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.1 mm, rim

INTERIOR SURFACE TREATMENT: burnished

EXTERIOR SURFACE TREATMENT: burnished

HEIGHT (IN CM): 4.0

ORIFICE DIAMETER (IN CM): 9.1

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): N/A

BASE DIAMETER (IN CM): 4.1

ESTIMATED VOLUME (IN LITERS): 0.15 liters

DECORATION: A single horizontal engraved line encircles the rim. The remainder of the vessel body is divided into four panels with unique semi-circular and scroll engraved motifs (Figures A1-1a-b and A1-2). Each of the panels are divided by narrow vertical zones that have plain and cross-hatched fillers. One panel has opposed engraved semi-

circles and nested cross-hatched triangles; both of the semi-circular elements have narrow embedded cross-hatched bands (Figure A1-2). The second and third panels have a short cross-hatched hooked arm scroll motif with an associated cross-hatched scroll fill background. The fourth panel has a longer cross-hatched hooked arm scroll motif, curvilinear scroll lines, one cross-hatched triangle, and a cross-hatched engraved bracket (Figures A1-1a-b and A1-2).

TYPE: Unidentified engraved fine ware

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: Obtained in 1927 from Dan Jenkins.

ACCESSION NO.: 5425-613

VESSEL NO.: V-281

NON-PLASTICS: grog

VESSEL FORM: Jar with a short (11 mm) rim

RIM AND LIP FORM: Direct rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: dark gray

EXTERIOR SURFACE COLOR: dark gray

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.6 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and upper body

EXTERIOR SURFACE TREATMENT: smoothed on the lower body and base

HEIGHT (IN CM): 9.8

ORIFICE DIAMETER (IN CM): 9.4

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 8.7

BASE DIAMETER (IN CM): 6.1

ESTIMATED VOLUME (IN LITERS): 0.55 liters

DECORATION: The jar rim has closely-spaced rows of tool punctations. The vessel body has alternating zoned incised-punctated motifs (Figure A1-3). There are two panels with four sets of opposed incised semi-circles; the zones between the opposed semi-circles are filled with tool punctations. The other two panels have a central vertical incised divider, with two opposed sets of incised semi-circles, the innermost being filled with tool punctations (Figure A1-3). Large incised bracket dividers on either side of the incised semi-circles are also filled with tool punctations.

TYPE: Unidentified zoned incised-punctated utility ware vessel

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: From plowed-up burial found by Dan Jenkins in February 1939. It is associated with V-1962 to V-1967 and V-1969

ACCESSION NO.: 5425-630

VESSEL NO.: V-1968

NON-PLASTICS: grog

VESSEL FORM: Carinated bowl with two rim panels

RIM AND LIP FORM: Inverted rim and a rounded lip

CORE COLOR: G (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: dark grayish-brown

EXTERIOR SURFACE COLOR: strong brown, with fire clouds

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.2 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

EXTERIOR SURFACE TREATMENT: burnished on the rim and body

DECORATION: The upper rim panel is plain. The lower rim panel has opposed sets of diagonal engraved lines and hatched triangles (Figure A1-4).

TYPE: Simms Engraved

Figure A1-4. Simms Engraved carinated bowl (5425-630).

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: From plowed-up burial found by Dan Jenkins in February 1939. It is associated with V-1962, V-1963, and V-1965 to V-1969

ACCESSION NO.: 5425-631

VESSEL NO.: V-1964

NON-PLASTICS: fine grog and bone

VESSEL FORM: Bowl with opposed effigy head and tab tail appendages; two suspension holes (Figure A1-5)

RIM AND LIP FORM: Inverted rim and rounded lip

CORE COLOR: G (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: black

EXTERIOR SURFACE COLOR: strong brown; fire clouds on the rim and body

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.6 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim

EXTERIOR SURFACE TREATMENT: smoothed on the rim and body

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): N/A

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.41 liters

DECORATION: There are two horizontal applied ridges just below the rim, between the two bird head effigy attachments on the side of the vessel (not on the lip) as well as one of the suspension holes, and the flat tab tail (see Figure A1-5). The tab tail itself has a single suspension hole (in the area of the mouth) as well as two dots for eyes and a raised beak area, suggesting it also represents an effigy head, but one lying flat that is looking upwards rather than sideways (see Figure A1-5).

TYPE: Undefined effigy vessel

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 19.4

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.64 liters

DECORATION: The vessel has a row of small tool punctations under the lip. The rim panel has an engraved-punctated interlocking horizontal scroll motif repeated four times (Figure A1-6). The horizontal interlocking scrolls have a central horizontal engraved band filled with punctations, as well as attached punctate-filled brackets that extend towards either the rim or the vessel carination (Figure A1-6); there is a single small engraved rectangle between these brackets. Each interlocking scroll is divided by two engraved and punctate-filled brackets, and between the brackets is a single vertically-oriented engraved rectangle.

BASE DIAMETER (IN CM): 8.0

ESTIMATED VOLUME (IN LITERS): 0.62 liters

DECORATION: This bottle has a complex engraved design organized in four panels on the vessel body (Figure A1-30). Along the upper part of the body is a narrow horizontal band filled with hatched or cross-hatched brackets.

Two of the body panels are rectangular and vertical in orientation and have the same engraved motif, while the other two body panels are circular engraved motifs and different from each other (see Figure A1-30). The rectangular panels feature bounding curvilinear engraved lines with hatched pendant triangles, followed by two vertical engraved lines, and two narrow hatched ladders. The central element in the rectangular panels is a rectangle with upper, central, and lower hatched brackets. The negative space created by the brackets has two small and vertically-oriented engraved rectangles (see Figure A1-30b).

The first of the circular panels has concentric circles bounded by two sets of two opposed semi-circular engraved lines. One of the outermost bounding lines has hatched pendant triangles facing outward away from the center of the panel. Within the bounding semi-circular lines are five concentric circles; two of the outer circles form a circular zone filled with small hatched brackets and simple semi-circles.

The second circular panel panels has concentric circles bounded by two sets of two opposed semi-circular engraved lines. The outermost lines have hatched pendant triangles that point inwards towards the center of the panel (see Figure A1-30a). Within the bounding semi-circular lines are seven concentric circles, with two of the outer circles forming a circular zone filled with small hatched brackets and seven small hatched or simple semi-circles.

DECORATION: There is a single narrow hatched engraved band at the base of the bottle neck, and a corresponding horizontal engraved line above the vessel base. The bottle body decoration consists of a continuous scroll (a narrow hatched scroll) with an embedded hatched circle (Figure A1-32). There is a smaller ticked circle within the embedded circle, and at its very center is a single excised dot; there are three embedded hatched circles along the course of the scroll. The upper and lower parts of the scroll filler background consists of curvilinear hatched areas with negative ovals; each oval has a small excised spur that cut into the oval (Figure A1-32).

DECORATION: There is a single horizontal engraved line below the base of the bottle neck. On the vessel body are four repeating concentric engraved circles around body peaks and four dimpled applied nodes (see Figure A1-33). Each set of concentric circle motifs consist of an outer circle, a circular hatched band, a circle of dashed lines, and several closely-spaced concentric circles around the appliqued node.

The concentric circle motifs on this vessel are divided by large triangular elements that extend from near the top of the bottle body to near the base. These elements include three triangular hatched corners, separate sets of straight engraved lines, and one or two short curved engraved lines that originated along the margins of the large triangular elements (see Figure A1-33). Similar short curved lines are noted on other Belcher Engraved bottles, including one from the McClure site in Miller County, Arkansas (see Suhm and Jelks 1962:Plate 5m).

BASE DIAMETER (IN CM): 7.5

ESTIMATED VOLUME (IN LITERS): 0.54 liters

DECORATION: There are single horizontal engraved lines under the bottle neck and
above the vessel base. The vessel body has two distinctive engraved motifs, each
repeated twice on the body (Figures A1-34 and A1-35).

The first engraved motif is a rectangular panel like that noted on both Handy Engraved and Haley Engraved bottles from the Battle site (see Suhm and Jelks 1962:Plates 31b and 32d) as well as at the Wm. Handy Place (see Figure A2-15, below). The panel is defined by narrow hatched borders and distinct horizontal hatched brackets that divide the rectangular panel into two areas: each of these areas has a single small vertical engraved rectangle in it (see Figures A1-34a and A1-35).

The second engraved motif is an oval or elliptical panel defined by two vertical arcing lines (see Figures A1-34b and A1-35); such panels are characteristic of Hatchel Engraved bottles (Suhm and Jelks 1962:Plate 34a, d). Within the panel itself are two large circles, the innermost of which has ticked lines that face outward as well as opposed sets of three semi-circular engraved lines; the innermost of these lines has tick marks. This inner circle is divided in half by a single horizontal engraved and ticked line that has upper and lower ticked spurs (see Figure A1-34b).

VESSEL FORM: Bottle

RIM AND LIP FORM: Direct rim with a flat lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: dark gray

EXTERIOR SURFACE COLOR: dark gray

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.3 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the upper neck

EXTERIOR SURFACE TREATMENT: smoothed on the body and neck

HEIGHT (IN CM): 15.7

ORIFICE DIAMETER (IN CM): 4.8

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 6.1; 12.4 cm wide at the widest part of the bottle body

BASE DIAMETER (IN CM): 8.2

ESTIMATED VOLUME (IN LITERS): 0.51 liters

DECORATION: There are three horizontal engraved lines under the bottle neck, and a single horizontal engraved line near the vessel base. Within the panel created by these horizontal lines are three repeated semi-circular and circular engraved motifs (Figure A1-44). Dividing each of the motifs are two large spurred engraved circles, one atop the other.

Each motif has two broadly spaced opposed semi-circular engraved lines that extend from the top of the vessel body to the base. There are concentric semi-circles attached to both opposed engraved lines, as well as a central engraved circle (with repeated circular lines) with spurs (see Figure A1-44); the outermost concentric semi-circle has spurs or large ticks on it.

There are traces of a white kaolin clay pigment in the engraved lines.

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.1

BASE DIAMETER (IN CM): 6.7

ESTIMATED VOLUME (IN LITERS): 0.72 liters

DECORATION: The rim has five rectangular incised-punctated panels formed by narrow bands filled with tool punctates. Inside each large rectangle is a single smaller incised rectangle, four of which are filled with tool punctates; one of the incised rectangles is without the punctated fill elements (Figure A1-46).

The rim is separated from the vessel body by a single horizontal incised line. On the body are five large incised-punctated rectangular panels (see Figure A1-46). There are smaller incised-punctated panels at the center of each of the larger incised-punctated panels.

DECORATION: There are two rows of linear punctates on the rim, one row under the lip and the other just above the rim-body juncture. A single broad incised line marks the rim-body juncture itself (Figure A1-47). On the body are 16 incised panels formed by the intersection of broad horizontal and vertical incised lines; these panels extend from the rim-body juncture to just above the base. Each panel is filled with randomly placed tool punctations. A final element are four incised triangles that are pendant from the broad incised line at the rim-body juncture and occur at the top of the incised panels. These triangles are also filled with tool punctates (Figure A1-47).

DECORATION: The rim has horizontal brushing, and the lip is notched (Figure A1-49). Both strap handles have seven or eight vertical rows of tool punctations.

The vessel body has an appliqued-brushed motif that is repeated four times around the vessel. The motif includes four increasingly larger triangular appliqued ridges, with a large appliqued circle at the apex of the smallest appliqued triangle (see Figure A1-49). The appliqued triangles alternate in orientation, with their apex either pointing

towards the rim or towards the vessel base. The area between the applied triangles is filled with diagonal brushing marks.

EXTERIOR SURFACE TREATMENT: smoothed on the pedestal base

HEIGHT (IN CM): 10.0

ORIFICE DIAMETER (IN CM): 10.6

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.6

BASE DIAMETER (IN CM): 8.4

ESTIMATED VOLUME (IN LITERS): 0.64 liters

DECORATION: The rim has two horizontal rows of tool punctates below the lip as well as four diagonally-oriented tool punctated rows that extend to the rim-body juncture. The upper part of the body has seven horizontal rows of tool punctates above 10 tool punctated chevrons (Figure A1-63). The pedestal base is plain.

TYPE: cf. Sinner Linear Punctated

Figure A1-63. cf. Sinner Linear Punctated jar (5425-720).

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: Excavated by Dan Jenkins in 1928.

ACCESSION NO.: 5425-721

VESSEL NO.: V-316

NON-PLASTICS: grog

VESSEL FORM: Bowl with attachments for four missing pedestal legs; the attachments indicate the pedestal legs are 23 mm in diameter.

RIM AND LIP FORM: Inverted rim and a rounded lip

CORE COLOR: F (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: pale brown

EXTERIOR SURFACE COLOR: pale brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 6.1 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the body

EXTERIOR SURFACE TREATMENT: none

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: Found in Burial 2, Burial Plot 1, in association with V-1984 and V-1985 (Martin 1939).

ACCESSION NO.: 5425-722

VESSEL NO.: V-1986

NON-PLASTICS: grog and bone

VESSEL FORM: Carinated bowl with two rim panels

RIM AND LIP FORM: Everted rim and a rounded lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: dark brown

EXTERIOR SURFACE COLOR: dark brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 3.8 mm, rim

INTERIOR SURFACE TREATMENT: burnished on the rim and body

EXTERIOR SURFACE TREATMENT: burnished on the rim and body

HEIGHT (IN CM): 4.9

ORIFICE DIAMETER (IN CM): 10.5

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.3

BASE DIAMETER (IN CM): 5.0

ESTIMATED VOLUME (IN LITERS): 0.31 liters

DECORATION: The upper rim panel has a single horizontal engraved line under the lip that also has a row of engraved tick marks; there is a second engraved-ticked line at the junction of the upper and lower rim panels (Figure A1-65). The lower rim panel has four appliqued nodes with an engraved and ticked semi-circle around the node. Between each node and engraved semi-circle are six or seven regularly-spaced vertical to near vertical engraved lines (Figure A1-65). A white kaolin clay pigment had been rubbed in the engraved-ticked lines.

TYPE: Belcher Engraved, *var. Belcher*

SITE NAME OR SITE NUMBER: Battle Place

CONTEXT INFORMATION: Found in a grave on the Henry Moore (Battle) place. Obtained from the manager of an adjoining place about 1921.

ACCESSION NO.: 5425-725

VESSEL NO.: V-479

NON-PLASTICS: grog

VESSEL FORM: Bottle with a spool neck

RIM AND LIP FORM: Direct to slightly everted rim and a rounded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: very dark gray

EXTERIOR SURFACE COLOR: black

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.8 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the upper neck

EXTERIOR SURFACE TREATMENT: burnished on the neck and body

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 17.4

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.75 liters

DECORATION: The rim has a horizontal interlocking engraved scroll that is repeated twice around the vessel (Figure A1-71). There are also single rows of tool punctates along the rim and at the vessel carination.

The horizontal interlocking scroll has a central hatched band with two upper and lower hatched brackets that extend either to the rim or the vessel carination (see Figure A1-71). Between the upper and lower set of brackets are single horizontally-oriented engraved rectangles. The remainder of the scroll motif consists of upper and lower single hooked arm engraved lines.

The two scrolls are divided by two sets of vertical engraved and hatched brackets that extend from the rim to the vessel carination. Between them is a single vertically-oriented engraved rectangle (see Figure A1-71).

TYPE: Handy Engraved

BASE DIAMETER (IN CM): 8.0

ESTIMATED VOLUME (IN LITERS): 2.16 liters

DECORATION: There are single rows of tool punctates under the vessel lip and at the rim-body juncture. Between these punctated rows are two sets of opposed incised lines divided by a single horizontal incised line (Figure A1-84). The vessel body has four sets of incised concentric circles, with an applied node at the center of the concentric

circles. Furthermore, the concentric incised circles are outlined by half circles of applied fillets (Figure A1-84).

The two strap handles both have five vertical rows of applied fillets (see Figure A1-84).

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.40 liters

DECORATION: The top of the bottle body has six horizontal engraved lines that are bisected by three sets of three vertical appliqued ridges (cf. Suhm and Jelks 1962:Plate 23o-p). A white kaolin clay pigment had been rubbed in the engraved lines (Figure A1-87a-b). A similar Friendship Engraved bottle has been documented from a burial at the Wm. Handy Place (see Figure A2-9, below).

The lower part of the body has three sets of narrow concentric engraved zones, each partially filled with hatched or cross-hatched areas; one of the two concentric engraved zones in each set has a cross-hatched element that closely resembles the decoration seen on the bodies of engraved canebrake rattlesnake Caddo bottles (Walters 2006). The lower concentric element encircles three short vertical appliqued ridges (see Figure A1-87a-b). On either side of the central engraved-appliqued motifs on the lower body are three rectilinear cross-hatched engraved zones with negative ovals and triangles.

DECORATION: There are two horizontal engraved lines at the top of the bottle neck; the lower line has small downward-pointing triangular tick marks (Figure A1-89). The upper part of the vessel body is divided into three panels by three sets of vertical applied ridges. The panels contain three horizontal cross-hatched bands. On the lower body, there

are also three panels defined by sets of vertical applied ridges, but in the latter case, the applied ridges lie at the center of the panel, and the outside edges of the panel (immediately below the vertical applied ridges on the upper body) are defined by engraved brackets with four triangular hatched corners (Figure A1-89). Inside each bracket is another smaller bracket, turned horizontal, also with four triangular hatched corners. Between the central applied ridges and the engraved brackets are two opposed sets of two curvilinear cross-hatched engraved bands (Figure A1-89).

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 5.8; 13.5 cm wide at the widest part of the vessel body

BASE DIAMETER (IN CM): 7.5

ESTIMATED VOLUME (IN LITERS): 0.59 liters

DECORATION: At the top of the vessel body is a narrow engraved panel with eight hatched brackets. The remainder of the vessel body has an elaborate vertical hooked arm scroll motif enclosed in rectangular panels delimited by vertical engraved lines on the sides, and negative ovals (between 3-5 negative ovals per panel) on the side of the panel opposite the hooked scroll (Figure A1-91a-b). These negative ovals are outlined by punctate-filled brackets.

The hooked arm scroll includes a central engraved line with a hook at one end as well as a second hooked arm that is comprised of several fine engraved lines and hatched spurs or small pendant triangles (see Figure A1-91a-b). At the center of the hooked arm scroll is a small hourglass-shaped element with hatched corners; this element is attached to a vertical excised band that is joined to a second cross-hatched and excised curvilinear zone that parallels the second hooked arm (see Figure A1-91a-b). At its base is an open area with a single engraved half circle.

DECORATION: The bottle neck has three horizontal engraved lines below the lip, and there are two horizontal engraved lines near the vessel base. The vessel body has two rectangular engraved panels filled with a hooked arm scroll motif (Figure A1-92a-b). The sides of each panel are defined by five fine and closely-spaced vertical engraved lines, with spurs on the two outside lines (Figure A1-92a-b).

The hooked arm scroll motif in each panel includes two opposed hooked arms (consisting of multiple fine engraved lines) connected by two free-flowing curvilinear lines (see Figure A1-92a-b). At the top of each panel are a cross-hatched pendant triangle and a curvilinear zone with a single centrally-placed cross-hatched bracket. A companion element is also noted at the bottom of each panel, along with two small half circles.

DECORATION: This bottle has an unusual design of two panels set off by diagonal grooves that begin at the top of the vessel body and extend almost to the base (Figure A1-97a-b). There are also a series of horizontal engraved lines at the top of the vessel body.

The first engraved body panel has two parts divided by a central diagonal engraved band and an intersecting central horizontal engraved band. Each part has half circles with spurs, ovals, and hatched brackets (see Figure A1-97a-b). The second panel is divided by a scroll with spurs with an embedded, spurred, circle. On the upper left hand side of the panel is a small rectangular area (with spurs along the outside of the rectangle) filled with hooked engraved lines, cross-hatched bands, excised brackets, and hatched half circles. The lower right hand side of the panel has a corresponding small rectangular area, but it has half circles, small circles, and cross-hatched brackets (see Figure A1-97a-b).

ESTIMATED VOLUME (IN LITERS): 1.17 liters

DECORATION: There are single rows of tool punctates under the lip and at the rim-body juncture. Between these punctated rows are horizontal and diagonal brushing marks and applied nodes: three sets of two nodes (one above the other) and one set with one lower node (Figure A1-100). The vessel body is covered with opposed brushing marks.

TYPE: unidentified brushed-applied-punctated utility ware

SITE NAME OR SITE NUMBER: Battle Place

ACCESSION NO.: 5425-2453

CONTEXT INFORMATION: Found in a grave, in association with V-1781, on the west side of a low platform at the north end of the Battle Mound in 1938, by Perry Marshall. This grave was encountered when Mr. Marshall was digging in the mound to obtain dirt for a chimney.

VESSEL NO.: V-1782

NON-PLASTICS: grog; sandy paste

VESSEL FORM: Carinated bowl with two rim panels

RIM AND LIP FORM: Everted rim and a rounded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: black

EXTERIOR SURFACE COLOR: black

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.5 mm, rim; 5.3 mm, body

INTERIOR SURFACE TREATMENT: smoothed on the body and burnished on the rim

EXTERIOR SURFACE TREATMENT: burnished on the rim and body

HEIGHT (IN CM): 6.5

ORIFICE DIAMETER (IN CM): 15.6

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 13.1

BASE DIAMETER (IN CM): 5.4

ESTIMATED VOLUME (IN LITERS): 0.61 liters

DECORATION: The upper rim panel has a row of excised punctations under the lip as well as a single central horizontal engraved line. The lower panel has two distinctive engraved motifs. The first, delimited by two sets of three diagonal engraved lines and an upper horizontal engraved line, has a ticked curvilinear scroll, with a row of tick marks along the upper horizontal line (Figure A1-101). The second motif has the same sets of three diagonal engraved lines at either end, with the featured elements including four

diagonal dashed lines and four diagonal lines with upper and lower hatched triangles (Figure A1-101).

A white kaolin clay pigment had been rubbed in the engraved lines.

TYPE: Belcher Engraved, *var. Owen*

Vessels from the Wm. Handy Place at the Battle Site (3LA1)

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave (Burial C) in a cemetery excavated in 1940 by Glenn Martin. Associated vessels in the grave are V-2098, V-2099, and V-2101.

ACCESSION NO.: 5425-680

VESSEL NO.: V-2100

NON-PLASTICS: grog

VESSEL FORM: Jar with a short (10 mm) rim

RIM AND LIP FORM: Everted rim with a rounded lip

CORE COLOR: A (fired and cooled in a high oxygen environment)

INTERIOR SURFACE COLOR: strong brown

EXTERIOR SURFACE COLOR: strong brown, with fire clouding

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.3 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): N/A

BASE DIAMETER (IN CM): 7.4

ESTIMATED VOLUME (IN LITERS): 0.46 liters

DECORATION: There are six rows of large applied nodes that completely cover the rim and much of the vessel body (Figure A2-2); the lower body is plain.

TYPE: Moore Noded

Figure A2-2. Moore Noded bowl from the Wm. Handy Place (5425-682)

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave (Burial E) in a cemetery excavated by W. Gamel Smith in the fall of 1941. Associated funerary objects include V-2338, 2339, and 2341 and a jasper arrow point.

ACCESSION NO.: 5425-692

VESSEL NO.: V-2340

NON-PLASTICS: grog-bone

VESSEL FORM: Jar with two opposed strap handles (30 mm in width)

RIM AND LIP FORM: Everted with a rounded lip

CORE COLOR: G (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: very dark gray

EXTERIOR SURFACE COLOR: light yellowish-brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.2 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

EXTERIOR SURFACE TREATMENT: none

ORIFICE DIAMETER (IN CM): 12.3

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.7

BASE DIAMETER (IN CM): 7.8

ESTIMATED VOLUME (IN LITERS): 0.77 liters

DECORATION: The rim has single rows of tool punctations, one row under the lip and the other at the rim-body juncture. Horizontal brushing fills the area between the tool

punctated rows, along with two opposed applied nodes in the central part of the rim (Figure A2-3). The strap handles have opposed and overlapping brushed marks on them.

The vessel body has a series of nine applied chevrons that extend from the rim-body juncture to near the base. The area defined by each of the applied chevrons is filled with opposed brushing; eight of the applied chevron areas also has a small centrally placed applied node (see Figure A2-3).

TYPE: Haley Complicated Incised

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave (or graves) in a cemetery excavated by Horace McLendon in the fall of 1941. Associated vessels (from several graves dug at that time) include V-2342 to V-2365.

ACCESSION NO.: 5425-701

VESSEL NO.: V-2348

NON-PLASTICS: grog

VESSEL FORM: Jar with opposed strap handles

RIM AND LIP FORM: Everted rim with a flat and exterior folded lip

CORE COLOR: G (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: dark gray with patches of pinkish gray

EXTERIOR SURFACE COLOR: pinkish gray with patches of dark gray

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.0 mm, rim

INTERIOR SURFACE TREATMENT: smoothed

EXTERIOR SURFACE TREATMENT: none

ORIFICE DIAMETER (IN CM): 15.2

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 11.5

BASE DIAMETER (IN CM): 8.6

ESTIMATED VOLUME (IN LITERS): 1.43 liters

DECORATION: The rim has horizontal brushed-incised lines, and the lip is notched. The strap handles have seven closely-spaced and vertical applied ridges on them (Figure A2-4).

The body of this jar has four chevrons defined by applied fillets; the apex of two of the applied chevrons is underneath the strap handles. At the center of each chevron is a large applied node. The remainder of the vessel body, including the area within each of the chevrons, has opposed brushed-incised marks (see Figure A2-4).

TYPE: Haley Complicated Incised

ORIFICE DIAMETER (IN CM): 3.9

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.7; 10.3 cm in width at its widest point on the body

BASE DIAMETER (IN CM): 6.4

ESTIMATED VOLUME (IN LITERS): 0.44 liters

DECORATION: Set between upper and lower sets of horizontal and curvilinear engraved lines (below the base of the bottle neck and just above the vessel base), the bottle body has an engraved continuous scroll with three circle elements along the scroll (Figure A2-5). Both the scroll and circle elements have the characteristic spurred lines of the Haley Engraved type. There are also upper and lower sets (three each) of excised pendant triangles on upper and lower horizontal engraved lines that encircle the vessel.

TYPE: Haley Engraved

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 11.0

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.96 liters

DECORATION: The vessel has four vertical engraved panels filled with narrow sets of curvilinear and vertical engraved zones that have small punctates within each of the zones (Figure A2-6). The panels are separated from each other by one or two vertical engraved lines. At the bottom of each vertical panel is a continuous series of negative ovals defined by excising; the number of negative ovals ranges from six to eight in the four panels

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.1; 18.0 cm in width at the widest part of the body

BASE DIAMETER (IN CM): 6.7

ESTIMATED VOLUME (IN LITERS): 0.59 liters

DECORATION: The vessel body has a circular engraved motif that is repeated four times. The motif consists of alternating circular engraved lines (three lines) or circular dashed lines (two lines), and each motif shares part of one of the circular dashed lines (Figure A2-7a-b). Suspended from the top of the bottle body are four repeating triangular elements with hatched lines in each corner of the triangle; these elements are set above the area where the larger circular motifs merge and help to divide the circular engraved motifs.

CONTEXT INFORMATION: From a burial (an adult) in a cemetery, excavated by Guy W. Stacy in 1941. This vessel was found in association with V-2258 to V-2263.

ACCESSION NO.: 5425-2028

VESSEL NO.: V-2257

NON-PLASTICS: grog

VESSEL FORM: Bottle with a straight to slightly flared neck (Figure A2-13)

RIM AND LIP FORM: Direct rim with a rounded lip

CORE COLOR: N/D

INTERIOR SURFACE COLOR: red

EXTERIOR SURFACE COLOR: red

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 3.7 mm, rim

INTERIOR SURFACE TREATMENT: none

EXTERIOR SURFACE TREATMENT: smoothed on the body; eroded red slip

HEIGHT (IN CM): 18.5

ORIFICE DIAMETER (IN CM): 4.3

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.4; 13.0 cm at the widest point at the body

BASE DIAMETER (IN CM): 8.2

ESTIMATED VOLUME (IN LITERS): 0.61 liters

DECORATION: The exterior surface has a red slip

TYPE: Unidentified fine ware bottle, cf. Smithport Plain (Webb 1959:139)

Figure A2-13. Plain red-slipped bottle (5425-2028).

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave (Burial B) in a cemetery excavated by Glenn Martin in 1940. Associated vessels in the grave are V-2092 to V-2094 and V-2096 to V-2097.

ACCESSION NO.: 5425-2029

VESSEL NO.: V-2095

NON-PLASTICS: grog

VESSEL FORM: Jar with a tall rim

RIM AND LIP FORM: Everted rim and a rounded lip

CORE COLOR: A (fired and cooled in a high oxygen environment)

INTERIOR SURFACE COLOR: strong brown

EXTERIOR SURFACE COLOR: strong brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.4 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

EXTERIOR SURFACE TREATMENT: smoothed on the rim and body

HEIGHT (IN CM): 6.2

ORIFICE DIAMETER (IN CM): 6.6

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 5.4

BASE DIAMETER (IN CM): 4.0

ESTIMATED VOLUME (IN LITERS): 0.25 liters

DECORATION: The rim has three rows of diagonal incised lines, with horizontal brushing marks between the incised rows (Figure A2-14). The body has a central broad trailed circle, repeated four times around the vessel, that encloses a cluster of three appliqued nodes. Each trailed circle and appliqued node cluster is separated from the other by large trailed triangle elements pendant from the rim-body juncture; each of the triangles is filled with circular punctations (Figure A2-14).

TYPE: Foster Trailed-Incised, *var. unspecified*

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave in a cemetery excavated by Horace McLendon in the fall of 1941. Associated vessels (from several graves dug at that time) include V-2343 to V-2365.

ACCESSION NO.: 5425-2030

VESSEL NO.: V-2342

NON-PLASTICS: fine grog

VESSEL FORM: Bottle with a straight to slightly tapered neck

RIM AND LIP FORM: Direct rim with a rounded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: dark grayish-brown

EXTERIOR SURFACE COLOR: dark grayish-brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.4 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the upper neck

EXTERIOR SURFACE TREATMENT: burnished on the body and neck

HEIGHT (IN CM): 19.1

ORIFICE DIAMETER (IN CM): 3.9

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.8; 13.6 cm wide at the widest part of the body

BASE DIAMETER (IN CM): 7.0

ESTIMATED VOLUME (IN LITERS): 0.53 liters

DECORATION: The engraved motifs on the vessel body are delimited by four horizontal engraved lines at the top and bottom of the body; a red pigment had been rubbed in the engraved lines. The main motif on the body is repeated twice, and consists of a large engraved semi-circle or large ellipse with three distinct elements: a vertical hatched panel with two excised parabolas (and with two central small excised punctations) and one narrow oval (with a single short vertical engraved line within it); two sets of two vertical engraved lines; and two opposed hooked arm scroll lines attached to vertical engraved lines with short spurs or tick marks (Figure A2-15). The large semi-circles or ellipses are divided by two vertical hatched panels; these panels are nearly the same as the vertical hatched panels within the semi-circles or ellipses, except that they have two excised parabolas (with two excised punctations) and two narrow ovals with short vertical engraved lines within them (Figure A2-15).

TYPE: the bottle has elements of both Handy Engraved and Hatchel Engraved bottles (see Suhm and Jelks 1962:Plates 32 and 34)

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From a grave (Burial 1) excavated by Robert Shelton in 1940. Associated vessels include V-2030 to V-2032 and V-2034 to V-2039.

ACCESSION NO.: 5425-2031A

VESSEL NO.: V-2033

NON-PLASTICS: grog

VESSEL FORM: Carinated bowl

RIM AND LIP FORM: Inverted rim with a rounded, exterior folded lip

CORE COLOR: G (fired in a reducing environment, but cooled in the open air)

INTERIOR SURFACE COLOR: very dark gray

EXTERIOR SURFACE COLOR: very dark gray

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.5 mm, rim; 4.9 mm, body

INTERIOR SURFACE TREATMENT: smoothed on the body and burnished on the rim

EXTERIOR SURFACE TREATMENT: burnished on the rim and body

HEIGHT (IN CM): 9.9

ORIFICE DIAMETER (IN CM): 18.3

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 19.5

BASE DIAMETER (IN CM): 7.4, rounded base

ESTIMATED VOLUME (IN LITERS): 1.09 liters

DECORATION: The rim panel has a continuous scroll motif repeated four times, ending in excised brackets and a series of curvilinear engraved lines or negative S-shaped dividers (Figure A2-16). The scroll filler background consists of a series of small excised brackets and small excised triangles.

TYPE: Glassell Engraved, *var. Atkins*

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.5; 13.0 cm at the widest part of the body

BASE DIAMETER (IN CM): 7.5

ESTIMATED VOLUME (IN LITERS): est. 0.59 liters

DECORATION: There are three horizontal engraved lines at the top of the vessel body, and another near the vessel base. Pendant from the lowermost horizontal line near the top of the body are three cross-hatched engraved triangles, each with two small negative ovals. There are four large engraved triangles pendant from the one horizontal engraved line near the vessel base (Figure A2-20).

The main engraved element on the vessel body is a central scroll with embedded circles (four in number). Each of the embedded circles has a small central excised dot (see Figure A2-20). There are two unadorned scroll lines above and below the central scroll.

TYPE: Unidentified engraved fine ware

SITE NAME OR SITE NUMBER: Wm. Handy Place

CONTEXT INFORMATION: From an adult grave (Burial E) in a cemetery excavated in the fall of 1941. Associated vessels include V-2339 to V-2341, as well as a jasper arrow point (H-509, not documented during this project)

ACCESSION NO.: 5425-2053

VESSEL NO.: V-2338

NON-PLASTICS: grog

VESSEL FORM: Bottle

RIM AND LIP FORM: Everted/flared rim with a rounded lip

CORE COLOR: G (fired in a reducing environment and cooled in the open air)

INTERIOR SURFACE COLOR: dark grayish-brown

EXTERIOR SURFACE COLOR: brown to dark grayish-brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.9 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the upper neck

EXTERIOR SURFACE TREATMENT: burnished on the body and the neck; the burnished is vertically oriented on the neck and horizontally burnished on the body

HEIGHT (IN CM): 16.5

ORIFICE DIAMETER (IN CM): 4.6

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 5.4; 12.5 cm at its widest point on the body

BASE DIAMETER (IN CM): 5.3

ESTIMATED VOLUME (IN LITERS): 0.35 liters

DECORATION: There are two horizontal engraved lines on the vessel body below the bottle neck, and a continuous scroll motif on the body itself (Figure A2-36). This scroll motif, with hooked arms, is repeated five times on the vessel. There are also four sets of curvilinear engraved lines (scroll background fill elements) on the vessel, two above and two below the central hooked arm continuous scroll.

TYPE: Taylor Engraved

BASE DIAMETER (IN CM): 6.9

ESTIMATED VOLUME (IN LITERS): 0.30 liters

DECORATION: The vessel's upper rim panel has a row of punctations under the lip as well as a central horizontal engraved line (Figure A2-37). The lower rim panel has two appliqued nodes that are set between the strap handles. The appliqued nodes are the central element with engraved scrolls on either side of the nodes themselves (Figure A2-37), and with concentric semi-circles around each node. The central engraved line of each of the scrolls has tick marks; there is also a row of triangular punctations along the lower panel carination. The two strap handles each have a central appliqued node.

DECORATION: The Friendship Engraved bottle sherds represent part of the vessel body. Decorative elements apparent include four horizontal engraved lines near the base, each with tick marks, that are bisected by a single vertical applied ridge (Figure A2-60), as well as engraved semi-circles, one of which is filled with tool punctates. Adjacent to the engraved semi-circles are at least two vertical cross-hatched bands—one with tick marks along one edge—and a curving arc of three engraved lines.

The Hodges Engraved, *var. Candler* sherds are from the upper part of the bottle body (see Figure A2-60, left) as well as the undecorated spool neck. The decoration on the vessel body includes rectilinear cross-hatched engraved zones with a series of large and small negative ovals separated by an area bisected by three closely-spaced diagonal engraved lines. One of the rectilinear cross-hatched engraved zones has a row of small tick marks along one outside edge (see Figure A2-60, left).

NON-PLASTICS: grog

VESSEL FORM: Jar

RIM AND LIP FORM: Everted rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: very dark grayish-brown

EXTERIOR SURFACE COLOR: strong brown with fire clouds on the rim and body

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.2 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

EXTERIOR SURFACE TREATMENT: lower undecorated portion of the body is burnished

HEIGHT (IN CM): 11.8

ORIFICE DIAMETER (IN CM): 11.0

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.2

BASE DIAMETER (IN CM): 5.5

ESTIMATED VOLUME (IN LITERS): 0.78 liters

DECORATION: Vertical brushing on the rim and body, and there is a single horizontal incised line at the rim-body juncture (Figure A3-3). There are eight horizontal sets of stacked incised semi-circles (four lines per semi-circle on the rim and five lines per semi-circle on the body) on the rim and body, and the incised lines have cut through the brushing.

TYPE: unidentified brushed-incised jar. If the brushing had been confined to the incised semi-circles, it could be included as an undefined variety of Mound Tract Incised and Brushed (see Kelley 1997:52).

NON-PLASTICS: fine grog

VESSEL FORM: Bottle with flared neck

RIM AND LIP FORM: The neck is direct, but the rim is everted/flared, with a flat lip

CORE COLOR: G (fired in a reducing environment, but cooled in the open air)

INTERIOR SURFACE COLOR: very dark gray

EXTERIOR SURFACE COLOR: strong brown, with fire clouds on the body and neck

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.8 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the upper bottle neck

EXTERIOR SURFACE TREATMENT: burnished on the body and neck

HEIGHT (IN CM): 15.3

ORIFICE DIAMETER (IN CM): 4.9

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.7; 13.4 cm at the widest part of the body

BASE DIAMETER (IN CM): 4.7

ESTIMATED VOLUME (IN LITERS): 0.29 liters

DECORATION: There are two horizontal engraved lines at the top of the bottle body. The main engraved element is a continuous meandering scroll line with small triangular tick marks on it (Figure A3-4). Controlling the pattern of the meandering scroll are four upper and lower engraved elements that are pendant from the upper and lower horizontal engraved lines on the body. These elements begin with four simple pendant triangles, and each have long curving sets of closely-spaced engraved lines that end near the ticked meandering scroll (Figure A3-4).

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 13.5

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.51 liters

DECORATION: The upper rim panel has a single horizontal row of punctations below the lip, followed by a single central horizontal engraved line (Figure A3-5). The lower rim panel has four evenly spaced small nodes (8 mm in width) just above the rim carination. Bisecting each of these nodes are sets of six closely-spaced vertical engraved lines that extend from the top of the lower rim panel to (and in some cases, beyond) the rim carination. Between each of these nodes and vertical engraved line sets are four diagonal sets of engraved lines with small triangular tick marks (Figure A3-5). Finally, there are small tool punctates along the lower panel carination point.

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.6; 12.8 cm at the widest point on the body

BASE DIAMETER (IN CM): 5.2

ESTIMATED VOLUME (IN LITERS): 0.36 liters

DECORATION: The body of the bottle has four panels filled with concentric circles and alternating concentric dashes (Figure A3-18). The smallest and central circle has short spurs around its radius, suggesting a sun symbol (cf. Webb 1959:122), as well as a central circular punctated/excised element. The four panels are divided by four large hatched pendant triangles at the top of the bottle body; each of these pendant triangles has 4-5 hatched lines at its three corners, and there is a single triangular punctate or tick mark at its center.

DECORATION: There is a single row of small tool punctates on a raised ridge in the central part of the short bottle neck (see Figure A3-21); the bottle lip is also notched. A single curvilinear row of tool punctates was also placed at the very top of the vessel body, above four concentric circles of broad trailed lines. The concentric circles are divided by triangular sets of trailed lines at the upper and lower parts of the body, nearly meeting in the center of the vessel body (see Figure A3-21). These dividers are formed of either three or four trailed lines.

DECORATION: Immediately below the bottle neck is a narrow zone of closely-spaced opposed hatched engraved lines. Below that are three stacked tiers of cross-hatched engraved fill zones and negative meandering scrolls that are repeated four times around the vessel (see Figure A3-22a). Each of the cross-hatched engraved zones has eight negative ovals within it. Radiating from a single engraved line that encircles the base are four triangles with cross-hatched engraved corners and a single central negative oval (see Figure A3-22b); each triangle has a single graceful curved line that hooks towards the bottom of the cross-hatched fill zones.

BASE DIAMETER (IN CM): 5.0

ESTIMATED VOLUME (IN LITERS): 0.30 liters

DECORATION: There are four engraved panels on the bottle body, divided by a row of dashes or slot-like lines and four triangular excised areas under the bottle neck; these excised areas also have small negative circles (Figure A4-1).

On the body of the bottle itself, the decoration consists of four sets of concentric circles that alternate with rows of dashes and slot-like lines. At the center of these concentric circles is a circle with nine attached excised triangles (Elizabeth 1 body design, Schambach and Miller 1984:Figure 11-8).

SITE NAME OR SITE NUMBER: Foster Place (3LA27)

CONTEXT INFORMATION: From a grave exposed from a Red River flood in 1938. Associated vessels include V-1956, V-1958, and V-1959.

ACCESSION NO.: 5425-2136

VESSEL NO.: V-1957

NON-PLASTICS: shell

VESSEL FORM: Bottle with a straight to slightly bulging neck

RIM AND LIP FORM: Direct rim with a rounded, exterior folded lip

CORE COLOR: A (fired in a high oxygen or oxidizing environment)

INTERIOR SURFACE COLOR: reddish-yellow

EXTERIOR SURFACE COLOR: reddish-yellow on scraped areas; red on slipped areas

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.5 mm, neck

INTERIOR SURFACE TREATMENT: none

EXTERIOR SURFACE TREATMENT: slipped and burnished

HEIGHT (IN CM): 18.5

ORIFICE DIAMETER (IN CM): 3.9

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 4.3

BASE DIAMETER (IN CM): 6.6

ESTIMATED VOLUME (IN LITERS): 0.49 liters

DECORATION: This vessel was first covered with a red-slip, and then after it was fired, the slip was scraped away (to show the original color of the vessel before it was slipped) in certain distinctive ways to create decorative areas marked either by a slipped or scraped surface (Figures A4-3 and A4-4). In this case, the slip was scraped away in a narrow horizontal panel under the neck, followed by a slipped area with three horizontal lines cut through the slipping, and then by a continuous series of connected ovals created by scraping away the slip.

The principal decorative motif on this bottle, repeated four times, consists of a large circle made with alternating areas of slipped and non-slipped areas, with a central five-sided element; three of these large circles have a small slipped circle or dot at its very center, surrounded by a scraped area, but the fourth circle has the five-sided element and central dot or small circle outlined as scraped areas and by engraved lines (Figures A4-3 and A4-4). Above the vessel base is a series of four curvilinear zones outlined by the scraping slipped areas away. The base has no slipping on it.

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 6.7 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on rim and body

EXTERIOR SURFACE TREATMENT: smoothed on rim and body; fire clouds on body

HEIGHT (IN CM): 7.0

ORIFICE DIAMETER (IN CM): 20.8

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 19.4

BASE DIAMETER (IN CM): N/A, rounded base

ESTIMATED VOLUME (IN LITERS): 0.87 liters

DECORATION: Interlocking horizontal engraved scroll motif repeated twice on the vessel rim; the motifs are separated by two curved cross-hatched engraved brackets, and the space between the bracket dividers is filled with punctations (Figure A5-5). The interlocking scroll is set in an oval surrounded by a punctated zone. Within the oval is a broad horizontal scroll of cross-hatched engraved lines, with two attached sets of curved brackets that either extend to the carination or the upper part of the rim.

TYPE: Handy Engraved

Figure A5-5. Handy Engraved carinated bowl (5425-3623).

SITE NAME OR SITE NUMBER: Geo. W. Sentell Place

CONTEXT INFORMATION: From a grave, 1909

ACCESSION NO.: 5425-3625

VESSEL NO.: V-43

NON-PLASTICS: grog

VESSEL FORM: Jar

RIM AND LIP FORM: direct rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: brown

EXTERIOR SURFACE COLOR: brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 5.3 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim

EXTERIOR SURFACE TREATMENT: none

HEIGHT (IN CM): 10.4

ORIFICE DIAMETER (IN CM): 8.2

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 7.9

BASE DIAMETER (IN CM): 6.9

ESTIMATED VOLUME (IN LITERS): 0.51 liters

DECORATION: The rim has opposed triangular sets of very closely-spaced tool punctations that are separated by five single vertical rows of punctations (Figure A5-6). The body is divided into 17 narrow panels by 17 vertical applied fillets that extend from the rim-body juncture to near the vessel base. Between each set of applied fillets are vertical brushing marks.

TYPE: Sinner Linear Punctated

Figure A5-6. Sinner Linear Punctated jar (5425-3625).

SITE NAME OR SITE NUMBER: Geo. W. Sentell Place

CONTEXT INFORMATION: From a grave, 1909

ACCESSION NO.: 5425-3626

VESSEL NO.: V-56

NON-PLASTICS: grog, with a sandy paste

VESSEL FORM: Bottle with a straight neck

RIM AND LIP FORM: Direct rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a low oxygen environment)

INTERIOR SURFACE COLOR: black

EXTERIOR SURFACE COLOR: black; fire clouds on the body and neck

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 6.0 mm, neck

INTERIOR SURFACE TREATMENT: none

EXTERIOR SURFACE TREATMENT: smoothed on the body and neck

HEIGHT (IN CM): 20.8

ORIFICE DIAMETER (IN CM): 4.9

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 5.8; 13.7 cm wide at the widest point on the body

BASE DIAMETER (IN CM): 9.4

ESTIMATED VOLUME (IN LITERS): 0.78 liters

DECORATION: The bottle body has five distinct engraved rectangular panels that extend from the base of the bottle neck to just above the base; there is a single horizontal engraved line encircling the lower part of the bottle body (Figure A5-7). All five panels feature narrow curvilinear and semi-circular zones or bands that are interconnected, some of which are filled with cross-hatched engraved lines while others are left undecorated. One of the panels also has a large cross-hatched pendant triangle from the top of the panel, while another has a small cross-hatched triangle pendant from the side of a panel. These same panels also have single equal-arm cross elements.

TYPE: Unidentified engraved bottle

Figure A5-7. Engraved bottle from the Geo. W. Sentell Place (5425-3626)

SITE NAME OR SITE NUMBER: Geo. W. Sentell

CONTEXT INFORMATION: From a grave excavated by W. L. Conevy in 1909.

ACCESSION NO.: 5425-3627

VESSEL NO.: V-1121

NON-PLASTICS: grog and bone

VESSEL FORM: Bottle with straight to slightly bulging neck

RIM AND LIP FORM: direct rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a reducing or low oxygen environment)

INTERIOR SURFACE COLOR: very dark gray

EXTERIOR SURFACE COLOR: black

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.1 mm, rim

INTERIOR SURFACE TREATMENT: none

EXTERIOR SURFACE TREATMENT: burnished

HEIGHT (IN CM): 20.7

ORIFICE DIAMETER (IN CM): 4.8

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 5.2 at the neck; 13.1 at the widest part of the body

BASE DIAMETER (IN CM): 5.6

ESTIMATED VOLUME (IN LITERS): 0.46 liters

DECORATION: The body has vertical interlocking trailed scrolls repeated four times. Encircling the upper part of the bottle body, directly under the neck, are four sets of horizontal trailed lines, each with eight trailed lines (Figures A5-8 and A5-9).

TYPE: cf. Keno Trailed, *var. McClendon* (see Schambach and Miller 1984:Figure 11-41a).

SITE NAME OR SITE NUMBER: Cabaness Place, Spirit Lake, found in 1915

CONTEXT INFORMATION: From a grave, 1915. Associated with V-29.

ACCESSION NO.: 5425-158

VESSEL NO.: V-37

NON-PLASTICS: shell

VESSEL FORM: Bowl

RIM AND LIP FORM: Everted rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: black

EXTERIOR SURFACE COLOR: very dark grayish-brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 2.9 mm, rim

INTERIOR SURFACE TREATMENT: burnished on the rim; smoothed on the body

EXTERIOR SURFACE TREATMENT: burnished on the rim and body

HEIGHT (IN CM): 6.2

ORIFICE DIAMETER (IN CM): 13.6

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 10.3

BASE DIAMETER (IN CM): 6.5 cm

ESTIMATED VOLUME (IN LITERS): 0.34 liters

DECORATION: The rim has engraved concentric semi-circles (El Dorado 2 design) repeated four times around the rim; each set of engraved semi-circles is divided by cross-hatched engraved brackets (Figure A6-2).

The body has a continuous meandering negative scroll with tick marks that are defined or delimited by four equally-spaced curvilinear zones, two originating at the base

of the vessel and two at the top of the meandering scroll. These zones have hatched lines at their tips, and the remainder of the fills of these zones are filled with small semi-circular “fish-scale” elements (see Figure A6-2; see also Hemmings 1982:Figure 5-12b). There are traces of a white kaolin clay pigment in the engraved lines of this vessel.

TYPE: Natchitoches Engraved, *var. unspecified*

SITE NAME OR SITE NUMBER: Cabaness Place, Spirit Lake, found in 1915

CONTEXT INFORMATION: From a grave; the vessel was obtained from W. P. Agee

ACCESSION NO.: 5425-161

VESSEL NO.: V-40

NON-PLASTICS: shell

VESSEL FORM: Jar

RIM AND LIP FORM: Cut-down rim is inverted (Figure A6-3), with a rounded lip

CORE COLOR: A (fired and cooled in an oxidizing or high oxygen environment)

INTERIOR SURFACE COLOR: brown

EXTERIOR SURFACE COLOR: strong brown with evidence of fire clouding

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.4 mm, rim; 4.7 mm, body

INTERIOR SURFACE TREATMENT: smoothed on the body

EXTERIOR SURFACE TREATMENT: none

HEIGHT (IN CM): 8.5 cm

ORIFICE DIAMETER (IN CM): 9.5

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 9.5

BASE DIAMETER (IN CM): 6.5

ESTIMATED VOLUME (IN LITERS): 0.32 liters

DECORATION: Vertical and narrow applied ridges on the rim and body; the ridges extend from the rim to just above the base of the vessel (Figure A6-3; see also Hemmings 1982:Figure 5-12a). The cut down rim has lip notching.

TYPE: Belcher Ridged, *var. unspecified*

Figure A6-3. Belcher Ridged, *var. unspecified* jar from the Cabaness Place (V-40, 5425-161).

SITE NAME OR SITE NUMBER: Cabaness Place, near Spirit Lake

CONTEXT INFORMATION: From a grave; the vessel was obtained from W. P. Agee

ACCESSION NO.: 5425-225

VESSEL NO.: V-242

NON-PLASTICS: grog, bone, and hematite/ferruginous sandstone

VESSEL FORM: Seed jar with two opposed suspension holes (7.4 mm in diameter) near the lip (Figure A6-4a-b)

RIM AND LIP FORM: Inverted rim with a flat lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: strong brown

EXTERIOR SURFACE COLOR: strong brown with gray and brown fire-clouds

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 7.6 mm, rim

INTERIOR SURFACE TREATMENT: none

EXTERIOR SURFACE TREATMENT: smoothed on body

HEIGHT (IN CM): 9.0

ORIFICE DIAMETER (IN CM): 4.3

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 10.0 cm at the widest part of the body

BASE DIAMETER (IN CM): 9.0

ESTIMATED VOLUME (IN LITERS): 0.23 liters

DECORATION: Plain

TYPE: Unidentified plain seed jar

Figure A6-4. Plain seed jar from the Cabaness Place (5425-225): a, photograph; b, drawing by Bobby Gonzalez.

SITE NAME OR SITE NUMBER: Cabaness Place, near Spirit Lake

CONTEXT INFORMATION: From a grave; obtained from W. P. Agee

ACCESSION NO.: 5425-226

VESSEL NO.: V-175

NON-PLASTICS: grog

VESSEL FORM: Carinated bowl

RIM AND LIP FORM: Inverted rim with a rounded and exterior folded lip

CORE COLOR: B (fired and cooled in a reducing environment)

INTERIOR SURFACE COLOR: grayish-brown

EXTERIOR SURFACE COLOR: dark grayish-brown

WALL THICKNESS (RIM, BODY, AND BASE IN MM): 4.6 mm, rim

INTERIOR SURFACE TREATMENT: smoothed on the rim and body

EXTERIOR SURFACE TREATMENT: smoothed on the rim and body

HEIGHT (IN CM): 7.4

ORIFICE DIAMETER (IN CM): 15.0

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 16.0

BASE DIAMETER (IN CM): N/D, rounded base

ESTIMATED VOLUME (IN LITERS): 0.67 liters

DECORATION: Two stacked and alternating sets of engraved elements, each repeated twice across the rim panel. The engraved elements include two horizontal lines with excised pendant triangles (either pointing downward as in the case of the upper stacked design or pointing upward in the case of the lower stacked design) separated by vertically curvilinear engraved lines (Figures A6-5 and A6-6). With the stacking of the design elements, the pendant triangles on the upper stack are stacked above the vertical curvilinear lines on the lower stack, just as the pendant triangles on the lower stack are directly below the vertical curvilinear engraved lines element on the upper stack.
