INTRODUCTION

The Roger D. Simmons site (41TT321) is in the Sulphur River basin in East Texas. A single ancestral Caddo burial was exposed in 1984 during the removal of sand from the site for the construction of a school in Talco, Texas. Associated with the burial were three ceramic vessels—documented herein—as well as a large (ca. 18 cm in length) chipped stone bifacial tool made from non-local chert (identified as Edwards formation chert on the site form), an adze, and a celt.

SUMMARY AND CONCLUSIONS

The three ceramic vessels from 41TT321 are from an Early Caddo period (ca. A.D. 1000-1200) burial context. They include a small Spiro Engraved bowl with rim peaks and two small Holly Fine Engraved vessels: a bowl and a jar. The vessels are tempered with grog (67 percent) and grog-bone (33 percent).
