Caddo Ceramic Vessels from the E. B. Minter (41HP2) and Roger Attaway (41HP15) Sites in Hopkins County, Texas

Abstract
A number of ancestral Caddo ceramic vessels are in the collections at the Texas Archeological Research Laboratory at the University of Texas at Austin from the E. B. Minter (41HP2, n=4 vessels) and Roger Attaway (41HP15, n=5 vessels) in Hopkins County, Texas. We recently had the opportunity to fully document these vessels as part of our long-term efforts to characterize ancestral East Texas Caddo vessel forms, temper usage, and stylistic/decorative elements.

The University of Texas conducted excavations at the E. B. Minter site, in the upper White Oak Creek and Sulphur River basin, in May 1931. A 60 x 35 ft. area was excavated on a sandy knoll at that time based on a report that ceramic vessels and ceramic pipes had been found there in years past, but no features were found. A second area by a county road exposed Burial 1 at a depth of ca. 77 cm bs; Jackson noted that ceramic vessels had been found in this area months earlier by road grading work along the road. Burial 1 was laid out in an east-west orientation.

The Roger Attaway Farm site (41HP15) was located in the Spring of 1929 when heavy rains exposed a Caddo burial with five ceramic vessels and two arrow points. This site was 2 miles northwest of Black Oak, in the upper Caney Creek valley in the upper Sabine River basin. Mr. Attaway collected the exposed funerary objects, and then gave them to a Mr. George E. Cowan. Cowan sold four of the vessels to the University of Texas shortly thereafter.

Figure 1. Location of the E. B. Minter (41HP2) and Roger Attaway (41HP15) sites in East Texas.
The University of Texas conducted excavations at the E. B. Minter site, in the upper White Oak Creek and Sulphur River basin, in May 1931 (Jackson 1931). A 60 x 35 ft. area was excavated on a sandy knoll at that time based on a report that ceramic vessels and ceramic pipes had been found there in years past, but no features were found. A second area by a county road exposed Burial 1 at a depth of ca. 77 cm bs; Jackson (1931) noted that ceramic vessels had been found in this area months earlier by road grading work along the road. Burial 1 was laid out in an east-west orientation.

The Roger Attaway Farm site (41HP15) was located in the Spring of 1929 when heavy rains exposed a Caddo burial with five ceramic vessels and two arrow points. This site was 2 miles northwest of Black Oak, in the upper Caney Creek valley in the upper Sabine River basin. Mr. Attaway collected the exposed funerary objects, and then gave them to a Mr. George E. Cowan. Cowan sold four of the vessels to the University of Texas shortly thereafter.

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 7.4; maximum body diameter of 16.0 cm.

BASE DIAMETER (IN CM) AND SHAPE OF BASE: 6.2; circular and flat

ESTIMATED VOLUME (IN LITERS): 0.5

DECORATION (INCLUDING MOTIF AND ELEMENTS WHEN APPARENT): The top of the vessel body has three horizontal engraved lines, and there are two horizontal engraved lines above the vessel base. Between these horizontal line are four curvilinear and hooked arm engraved elements that begin and end at upper and lower engraved pendant triangles with cross-hatched corners. Each of the curvilinear engraved lines have a wider cross-hatched zone across from the hooked arm elements (Figure 4).

PIGMENT USE AND LOCATION ON VESSEL: none

TYPE AND VARIETY (IF KNOWN): Wilder Engraved, var. unspecified

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 10.5

BASE DIAMETER (IN CM) AND SHAPE OF BASE: 6.5; circular and flat

ESTIMATED VOLUME (IN LITERS): 1.1

DECORATION (INCLUDING MOTIF AND ELEMENTS WHEN APPARENT): The vessel rim is decorated with diagonal incised lines pitched in opposing directions that are separated by a single horizontal row of tool punctations; there is also a single row of tool punctations at the rim-body juncture. The vessel body is divided into four panels by four sets of three closely spaced vertical appliqued fillets. The panels themselves are decorated with three sets of diagonal opposed pinched rows (Figure 6).

PIGMENT USE AND LOCATION ON VESSEL: none

TYPE AND VARIETY (IF KNOWN): Unidentified utility ware
SITE NAME OR SITE NUMBER: Roger Attaway

VESSEL NO.: 5

VESSEL FORM: Carinated bowl

NON-PLASTICS AND PASTE: grog

RIM AND LIP FORM: Direct rim and rounded, exterior folded lip

DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 24.0

BASE DIAMETER (IN CM) AND SHAPE OF BASE: 7.5; circular and flat

ESTIMATED VOLUME (IN LITERS): 2.8

DECORATION (INCLUDING MOTIF AND ELEMENTS WHEN APPARENT): The rim is decorated with an engraved slanted scroll and circle repeated four times around the vessel. The central circle element has a smaller circle within it that has an equal-arm cross element with hatched pendant triangles at the top of the cross lines. The upper and lower scroll fill zones each have three negative oval elements outlined by cross-hatched engraved brackets and triangle elements (Figure 7).

PIGMENT USE AND LOCATION ON VESSEL: white clay pigment in the engraved lines

TYPE AND VARIETY (IF KNOWN): Ripley Engraved, var. Galt

SUMMARY AND CONCLUSIONS

The E. B. Minter Farm (41HP2) vessels are from a Middle Caddo period (ca. A.D. 1200-1400) burial associated with Sanders phase occupations in the upper Red, Sulphur, Big Cypress, and Sabine River basins. All four vessels from Burial 1 are grog-tempered, and include a plain bowl and a plain bottle as well as two Sanders Engraved carinated bowls with diagonal opposed engraved lines on their rim panels.

On the other hand, the five ceramic vessels from the Roger Attaway site (41HP15) are from a Titus phase (ca. A.D. 1430-1680) burial context. The vessels, all grog-tempered, include a red-slipped bottle, an incised-punctated-appliqued jar, a Wilder Engraved, var. unspecified bottle, and two Ripley Engraved carinated bowls of var. Carpenter or var. Galt.
