INTRODUCTION

There are ancestral Caddo vessels in the collections of the Texas Archeological Research Laboratory at the University of Texas from the Joseph Fabion (41SY24, n=4 vessels) and S. H. Latham (41SY25, n=3) sites in Shelby County, Texas. Those vessels from the Joseph Fabion site were exposed along the bank of a county road some time prior to October 1930, while those from the S. H. Latham site were exposed by 1920s flooding and collected by the landowner.
Documenting Vessels from the Joseph Fabion Site (41SY24)

The Joseph Fabion site is located along a northward-flowing tributary to Flat Fork Creek in the Sabine River basin in East Texas. The four vessels from the Joseph Fabion site in the TARL collections were donated to the University of Texas by a Mr. Frank Bussey in October 1930.

Documentation of Vessels from the S. H. Latham Site (41SY25)

The S. H. Latham site is on Bayou Siepe in the Sabine River basin, about 16 km from its junction with the Sabine River. The three ceramic vessels in the TARL collections from the S. H. Latham site were purchased by UT from the landowner in May 1931. The vessels had been previously exposed by stream erosion and collected by the landowner in the 1920s, along with human skeletal remains.

SUMMARY AND CONCLUSIONS

The four vessels from the Joseph Fabion site are both grog-tempered (n=3) and bone-tempered (n=1). The bone-tempered vessel is a small bowl or small jar, while the grog-tempered vessels include an engraved bowl and an engraved bottle of uncertain type, along with a Pineland Punctated-Incised jar (see Jelks 1965), although there are stylistic resemblances to the engraved vessels from the Middle Caddo period Washington Square Mound site (41NA49) in the Angelina River basin (Hart 2014; Hart and Perttula 2010; Perttula et al. 2010). The proportion of brushed sherds (42.5 percent) in the small assemblage of decorated sherds from the site also suggest its principal occupation was by Caddo peoples in the Middle Caddo period (ca. A.D. 1200-1400).

In the case of the vessels from the S. H. Latham site, one is a plain grog- and bone-tempered jar, while the other two are grog-tempered engraved bottles. The first bottle has decorative elements very reminiscent of Wilder Engraved, a Late Caddo period type found on sites in the Big Cypress and Sabine River basins, including sites at Toledo Bend Reservoir (Perttula and Walters 2015), while the second has horizontal engraved lines on the vessel body as well as two sets of scalloped engraved elements pendant from two of the horizontal engraved lines.
