Ancestral Caddo Ceramic Vessels from the Wright Plantation (41RR7) and Rowland Clark (41RR77) Sites in the Harris Collection at the National Museum of Natural History, Smithsonian Institution

Timothy K. Pertula

Introduction

The collection of R. King Harris at the National Museum of Natural History (NMNH) at the Smithsonian Institution has ancestral Caddo ceramic vessels from the Wright Plantation (41RR7) and Rowland Clark (41RR77) sites along the Red River in East Texas (Figure 1). Other than the site provenience and the burial number of two of the vessels at the Rowland Clark site, there is no more detailed documentation available on when or where within the sites that Harris obtained the ceramic vessels. Nevertheless, it is important as part of the broader study of the history of Caddo ceramic vessel forms and decorative motifs to put these vessels on record.

Wright Plantation Vessel

The Wright Plantation site is a multiple mound center on the Red River, about 1 km north of the Fasken site (41RR14), another multiple mound center (Prikryl 2008), and 7 km upstream from the Sam Kaufman site (41RR16), a very large village with two constructed mounds and several discrete cemeteries (Perttula 2008). The site has both Mounds Prairie and McCurtain phase occupations at the site, and at least one of the mounds ("the low sandy mound" in R. King Harris notes) at Wright Plantation appears to have been constructed and used as a burial mound during the McCurtain phase. During the 1930s, the landowner, George Wright, recovered many ceramic vessels from this mound (Mound B), and this collection is now in the holdings of the University of Oklahoma.

The one vessel from the Wright Plantation site is a large shell-tempered and red-slipped Avery Engraved compound bowl (Figure 2). Such vessels are present in McCurtain phase contexts in this stretch of the Red River (see Perttula 2008:Figure 57c-d), most likely from post-A.D. 1500 contexts. Site records on the Texas Historic Sites Atlas indicate that a Hudson Engraved vessel, also dating to late McCurtain phase times, came from the “low sandy mound” along with a turquoise pendant.

Rowland Clark Site Vessels

R. King Harris referred to this site as owned by John Dews at the time he collected several Caddo vessels from a Burial 2. John Dews was listed as the site owner on the 1982 site form for the Rowland Clark site (41RR77).

Perino (1994) excavated ancestral Caddo burials from two cemeteries at the site, the first (with burials 1-21) dating to the early McCurtain phase (ca. A.D. 1300-1500), and the remainder (burials 22-39) dating to the late McCurtain phase (ca. A.D. 1550-1700). R. King Harris recovered four ceramic vessels from what he labeled as Burial 2 at the John Dews site. Unlike the burials excavated by Perino (1994), the Burial 2 ceramic vessels date to ca. A.D. 1000-1200 (in Early Caddo period times), based on the Spiro Engraved bottle from the burial (Figure 3). The other three vessels associated with the Spiro Engraved bottle include a plain bowl with lip tabs (Figure 4) and two plain carinated bowls (Figures 5-6).

Summary and Conclusions

Among the many ancestral Caddo ceramic vessels in the R. King Harris collection at the NMNH from Red River County, Texas, five vessels can be identified from the available records and notes from the Wright Plantation (41RR7) and Rowland Clark (41RR77) sites. The one vessel from the Wright Plantation site is a late McCurtain phase (ca. A.D. 1500-1700) red-slipped Avery Engraved compound bowl, likely obtained from a low sandy mound at the site. The four ceramic vessels from a burial at the Rowland Clark site date to Early Caddo period times (ca. A.D. 1000-1200), rather than to burials excavated by Perino (1994) at the site that date to early and late McCurtain phase contexts.

Acknowledgments

Thanks to the staff at the National Museum of Natural History (NMNH) for access to the King Harris collections, and also to Robert Cast and Bobby Gonzalez, then working in the Historic Preservation Program at the Caddo Nation of Oklahoma, who arranged the documentation visit to the NMNH. Bo Nelson took the photographs in this article, and Mark Walters assisted with the 2005 vessel documentation. Lance Trask prepared Figure 1.
