Caddo Ceramic Vessels from the Sipes Hill Site (41RK602) along Martin Creek in the Sabine River Basin in East Texas

Abstract
The Sipes Hill site (41RK602) is an ancestral Caddo site on Martin Creek, near Trammel's Trace, about 20 km from its confluence with the Sabine River. It is ca. 2 km downstream from the Martin Lake dam. The Sipes’ Home site (41RK603) is about 100m to the northeast.

This site was found and investigated by Buddy C. Jones in the 1950s or early 1960s. He did an unknown amount of excavations at the site, and ended up excavating at least one Caddo burial at the site; there are no available notes concerning these excavations or the burial feature, however. Whole vessels from the Sipes Hill site in the Jones collection are at the Gregg County Historical Museum.

INTRODUCTION

The Sipes Hill site (41RK602) is an ancestral Caddo site on Martin Creek, near Trammel's Trace, about 20 km from its confluence with the Sabine River (Figure 1). It is ca. 2 km downstream from the Martin Lake dam. The Sipes' Home site (41RK603) is about 100 m to the northeast.

Figure 1. Locations of the Sipes Hill (41RK602) and Sipes’ Home (41RK603) sites in East Texas. Figure prepared by Lance Trask.

This site was found and investigated by Buddy C. Jones in the 1950s or early 1960s. He did an unknown amount of excavations at the site, and ended up excavating at least one Caddo burial at the site; there are no available notes concerning these excavations or the burial feature, however. Whole vessels from the Sipes Hill site in the Jones collection are at the Gregg County Historical Museum.
A total of 10 whole or almost whole ceramic vessels have been documented from the Sipes Hill site. The engraved fine ware vessels are typologically identified as Ripley Engraved, a post-A.D. 1450 fine ware in Titus phase communities in both the Big Cypress and Sabine River basins (Fields and Gadus 2012; Purtula 2012), or at least have stylistic elements commonly seen on Ripley Engraved in the mid-Sabine River basin. This suggests that the Sipes Hill site has a Late Caddo period component (ca. A.D. 1450-1680) that is part of the Pine Tree Mound community (Fields and Gadus 2012:Figure 9.10).

SITE NAME OR SITE NUMBER: Sipes Hill
VESSSEL NO.: 2003.08.1715
NON-PLASTICS AND PASTE: grog
VESEL FORM: Jar
RIM AND LIP FORM: Everted rim and rounded lip
CORE COLOR: F (fired in a reducing environment and cooled in the open air)
INTERIOR SURFACE COLOR: light reddish-brown; fire clouds on the rim
EXTERIOR SURFACE COLOR: light brown; fire clouds on the body and base
WALL THICKNESS (RIM, BODY, AND BASE IN MM):
rim: 4.2 mm; body, 6.3 mm
INTERIOR SURFACE TREATMENT: smoothed
EXTERIOR SURFACE TREATMENT: none
HEIGHT (IN CM): 14.4
ORIFICE DIAMETER (IN CM): 18.8
DIAMETER AT BOTTOM OF RIM OR NECK (IN CM): 18.2
BASE DIAMETER (IN CM) AND SHAPE OF BASE:
6.1; circular and flat
ESTIMATED VOLUME (IN LITERS): 1.6

DECORATION (INCLUDING MOTIF AND ELEMENTS WHEN APPARENT): The rim is decorated with horizontal brushing marks as well as two rows of linear tool punctates pushed through the brushing; the punctated rows are under the lip and at the rim-body juncture. The vessel body is divided into seven vertical panels by vertical rows of tool punctates that extend to the base. The panels are filled with vertical brushing marks that also extend to the vessel base (Figure 2).

SUMMARY AND CONCLUSIONS

The 10 documented ceramic vessels from the Sipes Hill site include two plain vessels, four utility ware vessels, and four fine ware vessels. All of the vessels are tempered with grog, but two of them (20%) also have either burned bone or crushed hematite added to the paste. The vessels have been uniformly fired in a low oxygen or reducing environment, but 90% of them were subsequently cooled in the open air, leaving a thin oxidized surface on one or both vessel cores.

The plain vessels from the Sipes Hill site are small carinated bowls. The utility ware vessels are small to medium-sized jars (n=3) and a carinated bowl. They are decorated with brushed and/or punctated elements, and the jars include one Pease Brushed-Incised vessel. The fine wares are small to medium-sized Ripley Engraved carinated and compound bowls. One is a Ripley Engraved, var. McKinney vessel with excised pendant triangles and dashes: the pendant triangle motif (Turner 1978; Thurmond 1990:Figure 6; Perttula et al. 2012:Figure 5). The design elements and motifs on the Sipes Hill vessels are consistent with other Titus phase funerary wares from the mid-Sabine River basin (see Fields and Gadus 2012).

This pendant triangle Ripley Engraved motif is thought to be common only in later post-A.D. 1550 Titus phase sites where it is part of the ceramic repertoire of local communities. However, no bowls with the traditional pendant triangle motif are present at the Pine Tree Mound site itself (Fields and Gadus 2012:674), calling into question the community affiliation of the Sipes Hill site, even though it falls within the defined boundaries of the Pine Tree Mound community (Fields and Gadus 2012:Figure 9.10).

We appreciate the help provided by Patti Haskins of the Gregg County Historical Museum in facilitating the vessel documentation, and thanks to Katie Tadlock for reconstructing several of the vessels from the site for documentation purposes.
